PETER. ANSON WRIGHT (HEATHER.)

Information Security Risk Assessment Toolkit Mark Talabis, Jason Martin, 2012-10-26 In order to protect company's information assets such as sensitive customer records, health care records, etc., the security practitioner first needs to find out: what needs protected, what risks those assets are exposed to, what controls are in place to offset those risks, and where to focus attention for risk treatment. This is the true value and purpose of information security risk assessments. Effective risk assessments are meant to provide a defensible analysis of residual risk associated with your key assets so that risk treatment options can be explored. Information Security Risk Assessment Toolkit gives you the tools and skills to get a quick, reliable, and thorough risk assessment for key stakeholders. Based on authors' experiences of real-world assessments, reports, and presentations Focuses on implementing a process, rather than theory, that allows you to derive a quick and valuable assessment Includes a companion web site with spreadsheets you can utilize to create and maintain the risk assessment

Network Security Tools Nitesh Dhanjani,Justin Clarke,2005-04-04 If you're an advanced security professional, then you know that the battle to protect online privacy continues to rage on. Security chat rooms, especially, are resounding with calls for vendors to take more responsibility to release products that are more secure. In fact, with all the information and code that is passed on a daily basis, it's a fight that may never end. Fortunately, there are a number of open source security tools that give you a leg up in the battle.Often a security tool does exactly what you want, right out of the box. More frequently, you need to customize the tool to fit the needs of your network structure. Network Security Tools shows experienced administrators how to modify, customize, and extend popular open source security tools such as Nikto, Ettercap, and Nessus.This concise, high-end guide discusses the common customizations and extensions for these tools, then shows you how to write even more specialized attack and penetration reviews that are suited to your unique network environment. It also explains how tools like port scanners, packet injectors, network sniffers, and web assessment tools function.Some of the topics covered include: Writing your own network sniffers and packet injection tools Writing plugins for Nessus, Ettercap, and Nikto Developing exploits for Metasploit Code analysis for web applications Writing kernel modules for security applications, and understanding rootkits While many books on security are either tediously academic or overly sensational, Network Security Tools takes an even-handed and accessible approach that will let you quickly review the problem and implement new, practical solutions--without reinventing the wheel. In an age when security is critical, Network Security Tools is the resource you want at your side when locking down your network.

Golzup conducts research and development to develop more and better options for demonstrations, continuous monitoring; continuous updating of network database (self-awareness, knowledge base), and automation. Attack Graph AggregationThe Cyber Security Toolkit proprietary software is based on exclusive rights to GMU Patents - the US 7,627,900 Patent (Attack Graph Aggregation) may be the best as a single litmus test and door-opener. Attack graph aggregation delivers the 'attack graph' and offers 'defense in depth'. cyber security dashboard providers need this technology, as do providers of cyber security command centers (and online intrusion detection, intrusion prevention, and penetration testing visualization systems).Abstract Title - Innovation for Cyber DashboardsGolzup delivers cyber security visualization for demonstrations, dashboards, and command centers using a professional

consulting services model, and advanced project management tools. This assures the customer of minimal cost of ownership achieved for cyber security visualization, vulnerability assessment, prioritization of risks, remediation of risks, proof-of-concept, phased implementation, and education and training. You may deliver all seven services with Golzup. Golzup transfers knowledge to your firm for the purpose of deploying the patented technology more widely through collaboration with you. Step-by-step implementation includes a contract kickoff meeting followed by an executive overview in a customer-site conference room or facility. Golzup leads the roll-out of the project plan for cyber security assessment using intellectual property. Together, we use patented technology to identify system vulnerabilities and recommend priority remediation. Follow-on efforts include remediation using Golzup engineering change management, and cost avoidance using contract consolidation findings. Bottom line first: implement cyber security visualization capability using the automated solutions developed from the intellectual property. Next - overview on the patented technology. By using a building block approach, Golzup continually updates and expands its cyber security visualization capabilities for legacy and new systems.
