Shannon Airport Valerie Sweeney,2004-01-01

Shannon Airport: a History Valerie Sweeney,2015 Comprehensive history of how a swampland at the estuary of the river Shannon was transformed into a vital link for transatlantic aviation. We trace developments from the golden age of the Flying-boats to the TWA Clippers all the way to modern jumbo jets. There are also sections on the initiatives in tourism and industrial development which depended on the airport, and on the historical events in which it featured.

Flying on Course Padraic Regan,2017 This case sets out the long-standing tradition of entrepreneurship and innovation in a public-sector organization located on the periphery of both Ireland and Europe. With regional development and employment creation at its core, Shannon Airport has grappled with technological innovation, regulatory changes, cyclical industry downturns and ownership restructurings in order to survive and once again begin to thrive.

Ireland's Shannon Story Brian Callanan,2000 This book covers one of Ireland's most significant single development efforts in the twentieth century. Beginning with the early era in the 1940s the book explains how the Shannon Airport experiment originated through local effort spurred by sympathetic political leaders. It developed into a multi-million pound enterprise in what was a remote location in the west of Ireland. Callanan examines the early 1960s initiatives which were typified by experimentation, trial and error; they led to the growth of an industrial estate, a new town, and emerging tourist attractions. Many of these projects were first viewed with suspicion and hostility; stoic bureaucracy had to be overcome. These barriers were overcome by a strong local leadership, closely associated with national policy makers, together with a clear vision of what could be achieved and supported by personal contacts and networks between decision-makers. The work draws out lessons that were learned by the inexperienced leaders from mistakes they made. General international conclusions indicate how development can be powered at local and regional level, linking the Shannon story to a wider development theory and practical experiences in other countries.

Air Transport and Regional Development Case Studies Anne Graham,Nicole Adler,Hans-Martin Niemeier,Ofelia Betancor,António Pais Antunes,Volodymyr Bilotkach,Enrique J. Calderón,Gianmaria Martini,2020-12-29 This book is one of three inter-connected books related to a four-year European Cooperation in Science and Technology (COST) Action established in 2015. The Action, called Air Transport and Regional Development (ATARD), aimed to promote a better understanding of how the air transport related problems of core regions and remote regions should be addressed in order to enhance both economic competitiveness and social cohesion in Europe. This book focuses on case studies in Europe related to air transport and regional development. It is divided into four geographical regions after a general chapter that compares regional air transport connectivity between remote and central areas in Europe. The first region is Northern and Western Northern Europe (case studies related specifically to Norway, Finland, the United Kingdom, and Ireland); the second is Central and Eastern Europe, (Bulgaria, Bosnia and Herzegovina, and Poland); the third is Central Western Europe (Belgium and Switzerland); and finally, the fourth is Southern Europe (Portugal, Spain, and Italy). There is no other single source publication that currently covers this topic area in such a comprehensive manner by considering so many countries. The book aims at becoming a major reference on the topic, drawing from experienced researchers in the field, covering the diverse experience and knowledge of the members of the COST Action. The book will appeal to academics, practitioners, and policymakers who have a particular interest in acquiring detailed comparative knowledge and understanding of air transport and regional development in many different European countries. Together with the other two books (Air Transport and Regional Development Methodologies and Air Transport and Regional Development Policies), it fills a much-needed gap in the literature.

Infrastructure and the Architectures of Modernity in Ireland 1916-2016 Gary A. Boyd,John McLaughlin,2016-12-05 At the formation of the new Republic of Ireland, the construction of new infrastructures was seen as an essential element in the building of the new nation, just as the adoption of international style modernism in architecture was perceived as a way to escape the colonial past. Accordingly, infrastructure became the physical manifestation, the concrete identity of these objectives and architecture formed an integral part of this narrative. Moving between scales and from artefact to context, Infrastructure and the Architectures of Modernity in Ireland 1916-2016 provides critical insights and narratives on what is a complex and hitherto overlooked landscape, one which is often as much international as it is Irish. In doing so, it explores the interaction between the universalising and globalising tendencies of modernisation on one hand and the textures of local architectures on the other. The book shows how the nature of technology and infrastructure is inherently cosmopolitan. Beginning with the building of the heroic Shannon hydro-electric facility at Ardnacrusha by the German firm of Siemens-Schuckert in the first decade of independence, Ireland became a point of varying types of intersection between imported international expertise and local need. Meanwhile, at the other end of the century, by the year 2000, Ireland had become one of the most globalized countries in the world, site of the European headquarters of multinationals such as Google and Microsoft. Climatically and economically expedient to the storing and harvesting of data, Ireland has subsequently become a repository of digital information farmed in large, single-storey sheds absorbed into anonymous suburbs. In 2013, it became the preferred site for Intel to design and develop its new microprocessor chip: the Galileo. The story of the decades in between, of shifts made manifest in architecture and infrastructure from the policies of economic protectionism, to the opening up of the country to direct foreign investment and the embracing of the EU, is one of the influx of technologies and cultural references into a small country on the edges of Europe as Ireland became both a launch-pad and testing ground for a series of aspects of designed modernity.

Shannon Departures Bernard Share,1992 This book tells the story of perhaps the most significant social and regional initiative in the history of Ireland. For many Shannon is synonymous only with an airport, but this is only part of a reality which encompasses an extraordinary range of activities, from a customs free industrial estate to the encouragement of domestic crafts; from tourist management to development of local heritage initiatives.

Shannon Die ... Never Joe Hennessy,2008-05 Written in 1972 Shannon die Never goes on to tell the story of the actions taken by the employees of that Airport on hearing that their place of employment was to be over flown. The fact that their efforts turned Shannon into one of the best known Airports in the world, because of its Duty Free and Industrial Estate where companies from all over the world created tax free subsidiaries. Their plan was to build a ship to go into space and bring tourists from there back to Shannon. Without his knowledge Sam was instrumental in helping them accomplish this feat. The fiction became fact (at least the over flying part of it in 1993).
