*The Promise of New Technologies in an Age of New Health Challenges* A.J. Maeder,K. Ho,A. Marcelo,2016-11-24 There is a changed emphasis in many health services, with conventional pressures such as budget and workforce constraints, combined with the indirect forces of social change and strategic direction, bringing about the need for more flexible approaches for the longer term. By enabling different care models and delivery channels, telehealth offers demonstrably effective and sustainable solutions for issues such as access to and quality of care. This book presents 18 papers delivered at the 5th Global Telehealth Conference, held in Auckland, New Zealand, in November 2016. The theme chosen for Global Telehealth 2016 is 'The Promise of New Technologies in an Age of New Health Challenges', and the papers included here cover a wide variety of topics, from theoretical and abstract contributions through to discussions of practical projects and highly specific applied contributions. The book also includes two invited papers which detail recent contributions to two global issues in which telehealth plays a major role: universal health coverage and personal health monitoring. With papers ranging in scope from computer assisted screening technology for diabetic retinopathy to behavior change through computer games, this book will be of interest to all those involved in the design and provision of healthcare services.

*Personalized Context-Aware Mobile Notification System* Sternly K` Simon,2013-12-21 This book presents an overview of the components, approaches and techniques which are used to build a mobile phoneapplication that uses short messaging service (SMS) text messages to improve interaction, information distribution and communication of stakeholders in a university setting. The proposed application is built upon a multiple compatible mobile phone menu-based subscription management application that is also customizable. Since SMS has the potential to fill significantconnectivity and service gaps, this application can provide support for them to become more ubiquitous. Event-based approach towards context-aware personalized notification service is adopted, i.e. user will receive relevant immediate SMS to his/her mobile phone based on his/her subscription for preferred notifications. A trigger enables event management system to send out (semi-) automated personalized notification. Notification services that understand the context within which their users operate, i.e. identity,activity and time are derived based on a set of predetermined rules. This will benefit the stakeholders in terms of getting up-to-date notifications.

**Patient Compliance** Faiz Kermani, 2016-05-23 Vast global resources are ploughed into the delivery of treatment interventions ranging from diet and lifestyle advice to complex surgery. In all cases, whatever the intervention, unless the recipient is engaged with the process and understands why the intervention has been offered and the part they play in its success, compliance is an issue. Even where the individual does engage and understand, he or she may choose not to comply. Non-compliance is estimated to cost the pharma industry US\$70 billion per year. No figures exist for the cost to healthcare insurers and public health but non-compliance is undoubtedly one of the top five issues facing both drug developers and healthcare providers. During clinical trials, non-compliance undermines the accuracy of the data generated from the whole trial as well as particular aspects such as the efficacy of different dosages. This book explores the key factors which drive compliance and the part that healthcare professionals can play in improving this, with the key underlying goal of improving public health in its broadest sense.
