Owning the Olympics Monroe Price, Daniel Dayan, 2009-12-10 A major contribution to the study of global events in times of global media. *Owning the Olympics* tests the possibilities and limits of the concept of 'media events' by analyzing the mega-event of the information age: the Beijing Olympics. . . . A good read from cover to cover. —Guobin Yang, Associate Professor, Asian/Middle Eastern Cultures & Sociology, Barnard College, Columbia University From the moment they were announced, the Beijing Games were a major media event and the focus of intense scrutiny and speculation. In contrast to earlier such events, however, the Beijing Games are also unfolding in a newly volatile global media environment that is no longer monopolized by broadcast media. The dramatic expansion of media outlets and the growth of mobile communications technology have changed the nature of media events, making it significantly more difficult to regulate them or control their meaning. This volatility is reflected in the multiple, well-publicized controversies characterizing the run-up to Beijing 2008. According to many Western commentators, the People's Republic of China seized the Olympics as an opportunity to reinvent itself as the New China---a global leader in economics, technology, and environmental issues, with an improving human-rights record. But China's maneuverings have also been hotly contested by diverse global voices, including prominent human-rights advocates, all seeking to displace the official story of the Games. Bringing together a distinguished group of scholars from Chinese studies, human rights, media studies, law, and other fields, *Owning the Olympics* reveals how multiple entities---including the Chinese Communist Party itself---seek to influence and control the narratives through which the Beijing Games will be understood. digitalculturebooks is an imprint of the University of Michigan Press and the Scholarly Publishing Office of the University of Michigan Library dedicated to publishing innovative and accessible work exploring new media and their impact on society, culture, and scholarly communication. Lateral Preferences and Human Behavior Clare Porac, Stanley Coren, 2012-12-06 Lateral preferences are strange, puzzling, and on the surface, not particularly adaptive aspects of behavior. Why one chooses habitually to write or to brush the teeth with the right hand, while a friend or family member habitually uses the left hand, might be interesting enough to elicit some conversation over dinner or a drink, but certainly does not seem to warrant serious scientific study. Yet when one looks at human behaviors more carefully, one becomes aware that asymmetrical behaviors favoring one side or the other are actually a fairly universal characteristic of human beings. In the same way that we are right or left handed, we are also right or left footed, eyed, and eared. As a species, we are quite lopsided in our behavioral coordinations; furthermore, the vast majority of us are right sided. Considering that we are looking at a sizable number of behaviors, and at a set of biases that seem to be systematic and show a predictable skew in the population, the problem takes on greater significance. The most obvious form of lateral preference is, of course, handedness. When studying behavioral asymmetries, this is the issue with which most investigators start. Actually, we entered this research area through a much different route. Around 1971 we became interested in the problem of eye dominance or eye preference. This is a behavior where the input to one eye seems to be

preferred over that to the other in certain binocular viewing situations.

Prevention and Rehabilitation of Hamstring Injuries Kristian Thorborg, David Opar, Anthony Shield, 2020-03-21 This innovative book presents the latest insights into hamstring strain injuries (HSI), one of the most common problems in elite and recreational sport, with a unique focus on prevention and rehabilitation. The research within this area has evolved rapidly over the past 10 years and this text offers a comprehensive overview of the recent and most relevant advances. It fills a gap in the literature, since other books focus on muscle injuries in general and their surgical treatment. Structured around the current evidence in the field, it includes sections on functional anatomy and biomechanics; basic muscle physiology in relation to injury and repair; assessment of risk factors; and factors associated with hamstring strains. It also discusses considerations in relation to acute and chronic injuries and hamstring injury prevention, including pre-season and in-season interventions, as well as management strategies and rehabilitation protocols. The final chapter is devoted to additional interventions when conservative rehabilitation and injury prevention fail. Written by renowned experts in the field, this book will be of great interest to sports physiotherapists, sports physicians, physical trainers and coaches.

A Theory of Intergenerational Justice Joerg Chet Tremmel, 2009-12 This highly accessible book provides an extensive and comprehensive overview of current research and theory about why and how we should protect future generations. It exposes how and why the interests of people today and those of future generations are often in conflict and what can be done. It rebuts critical concepts such as Parfit's non-identity paradox and Beckerman's denial of any possibility of intergenerational justice. The core of the book is the lucid application of a veil of ignorance to derive principles of

intergenerational justice which show that our duties to posterity are stronger than is often supposed. Tremmel's approach demands that each generation both consider and improve the well-being of future generations. To measure the well-being of future generations Tremmel employs the Human Development Index rather than the metrics of utilitarian subjective happiness. The book thus answers in detailed, concrete terms the two most important questions of every theory of intergenerational justice: what to sustain? and how much to sustain?

Football Revolution Bart Wright, 2020-03-01 For the last twenty-five years, the most dominant offensive strategy in college football has been the spread offense, which relies on empty backfields, lots of receivers and passing, and no huddles between plays. Where the spread offense started, why it took so long to take hold, and the evolution of its many variations are the much-debated mysteries that Bart Wright sets about solving in this book. *Football Revolution* recovers a key, overlooked, part of the story. The book reveals how Jack Neumeier, a high school football coach in California in the 1970s, built an offensive strategy around a young player named John Elway, whose father was a coach at nearby California State University, Northridge. One of the elder Elway's assistant coaches, Dennis Erickson, then borrowed Neumeier's innovations and built on them, bringing what we now know as the spread offense onto the national stage at the University of Miami in the 1980s. With Erickson's career as a lens, this book shows how the inspiration of a high school coach became the dominant offense in college football, prepping a whole generation of quarterbacks for the NFL and forever changing the way the game is played.

Vanguard or Vandals Jon Abbink, 2021-11-29 This book contains a range of original studies on one of the major challenges in Africa today: the controversial role of youth in politics, conflict and rebellious movements. The issue is not only the drafting of child soldiers into insurgent armies or predatory militias, as in Somalia, Sierra Leone or Congo, but, more generally, that of the problematic insertion of large numbers of young people in the socio-economic and political order of post-colonial Africa. Even educated youths are being confronted with a lack of opportunities, blocked social mobility, and despair about the future. African youth, while forming a numerical majority, largely feel excluded from power, are socio-economically marginalized, thwarted in their ambitions, and have little access to representative positions or political power.

Sport and International Development Roger Levermore, Aaron Beacom, 2008-11-27 Investigating the capacity of sport to act both as a conduit for traditional development assistance activities and as an agent for change in its own right, this book argues that sport can contribute to the development process, particularly where traditional development approaches have difficulty in engaging with communities.

Semantic and Lexical Universals Cliff Goddard, Anna Wierzbicka, 1994-01-01 This set of papers represents a unique collection; it is the first attempt ever to empirically test a hypothetical set of semantic and lexical universals across a number of genetically and typologically diverse languages. In fact the word 'collection' is not fully appropriate in this case, since the papers report research undertaken specifically for the present volume, and shaped by the same guidelines. They constitute parallel and strictly comparable answers to the same set of questions, coordinated effort with a common aim, and a common methodology. The goal of identifying the universal human concepts found in all languages, is of fundamental

importance, both from a theoretical and a practical point of view, since these concepts provide the basis of the psychic unity of mankind, underlying the clearly visible diversity of human cultures. They also allow us to better understand that diversity itself, because they provide a common measure, without which no precise and meaningful comparisons are possible at all. A set of truly universal (or even near-universal) concepts can provide us with an invaluable tool for interpreting, and explaining all the culture-specific meanings encoded in the language-and-culture systems of the world. It can also provide us with a tool for explaining meanings across cultures in education, business, trade, international relations, and so on. The book contains 13 chapters on individual languages including Japanese (by Masayuki Onishi), Chinese (by Hilary Chappel), Thai (by Anthony Diller), Ewe (Africa, by Felix Ameka), Miskitu languages of South America (by Kenneth Hall), Australian Aboriginal languages Aranda, Yankunytjatjara and Kayardild (by Jean Harkins & David Wilkins, Cliff Goddard, and Nicholas Evans), the Austronesian languages Samoan, Longgu, Acehnese and Mangap-Mbula (by Ulrike Mosel, Deborah Hill, Mark Durie and Robert Bugenhagen), the Papuan language Kalam (by Andrew Pawley), and, last but not least French (by Bert Peters). In addition to the chapters on individual languages the book includes three theoretical chapters; Semantic theory and semantic universals (by Goddard), Introducing lexical primitives (by Goddard and Wierzbicka), and Semantic primitives across languages: a critical review (by Wierzbicka).
