The Cambridge History of Medieval Monasticism in the Latin West Alison I. Beach, Isabelle Cochelin, 2020-01-09 Monasticism, in all of its variations, was a feature of almost every landscape in the medieval West. So ubiquitous were religious women and men throughout the Middle Ages that all medievalists encounter monasticism in their intellectual worlds. While there is enormous interest in medieval monasticism among Anglophone scholars, language is often a barrier to accessing some of the most important and groundbreaking research emerging from Europe. The Cambridge History of Medieval Monasticism in the Latin West offers a comprehensive treatment of medieval monasticism, from Late Antiquity to the end of the Middle Ages. The essays, specially commissioned for this volume and written by an international team of scholars, with contributors from Australia, Belgium, Canada, England, France, Germany, Italy, the Netherlands, Spain, Switzerland, and the United States, cover a range of topics and themes and represent the most up-to-date discoveries on this topic.

Avian Biology Donald S. Farner, James R. King, 2013-09-03 Avian Biology, Volume III is a collection of articles that deals with the biology of birds such as their peripheral endocrine glands and reproductive system. One paper describes the avian reproductive system where physiological mechanisms that regulate gametogenesis get synchronized from stimuli in the environment, thus ensuring that the young are born at the appropriate season. Another paper correlates the morphology of the pituitary cells with the functions of the pituitary from physiological and chemical analyses. A couple of papers describes the peripheral endocrine glands and the process of neuroendocrinology that includes detailed analyses of the neurosecretory system anatomy and the ependymal function in the median eminence composed of the anterior and posterior divisions. One author describes the structure and refraction of avian vision, as well as the probable determination of visual pigments in the eye cones through in situ microspectrophotometry. The book then analyzes bird behavior through functional groups of bird activities. Bird enthusiasts, zoologists, and avian biologists will find this book interesting and informative.

Comparative Criminology Hermann Mannheim, 2013-08-21 This is Volume II of fifteen in a series on the Sociology of Law and Criminology. Originally published in 1965, this textbook is part two of two, meant for students and deals more fully than usual with such fundamental matters as the very concepts of crime and criminology and especially with the highly complex relationship between crime, the criminal law and certain burning moral issues of our time. It also includes several chapters on the methods of research used in criminological and penological investigations.

Public Budgeting Irene S. Rubin, 2015-01-28 Some of the best writings on public budgeting and finance can be found in the journals that ASPA publishes or sponsors. For this volume editor Irene Rubin has brought together the best of these articles - emerging classics that address the most important theoretical and practical problems underlying public budgeting. The anthology is organized topically rather than historically, with an effort to delineate the issues needed to understand some of the more recent controversies in the field. Rubin's introductory essay and section openers frame the key issues and provide historical context for each article. The collection begins with descriptions of what public budgeting is, where it comes from, and what it is for. It moves on to the relationship between budget processes and outcomes, constraints on budgeting, the legal context in which it operates, and adaptations to those constraints such as contracting out. The book concludes with a discussion of the ethics and norms that underlie budgeting in a democracy. Throughout the anthology, the emphasis is on areas of disagreement and debate, so students can get involved and explore different viewpoints.

The Lighthouse Function of Social Law Yves Jorens, 2023-07-30 This is the conference book for the XIV European Regional Congress of the International Society for Labour and Social Security Law, dedicated to the interactions between social law and other areas of law. In recent years, labour law and social security law have been subject to various reforms and developments. Social law is however not an isolated domain but rather interacts with other fields, often even functioning as a guide or giving direction to those lost at sea. In other words: serving as a lighthouse. The key aspect addressed in this book is the existence of a connection between social law *sensu stricto* (labour law and social security law) and other areas of law. Pursuing an inter- and multidisciplinary approach, it gathers contributions on topical and challenging issues in four broad areas: 1. Basic and fundamental principles of European social law 2. The future in the light of the past 3. The impact of regionalisation 4. Enforcement in social law In turn, various developments can be identified in connection with these topics: the emergence of social criminal law is creating new overlaps between social and criminal law; the growing number of administrative law sanctions offers new insights into and connections between social security law and administrative law; the increasing similarity of employment in the public and private sectors raises questions about the applicability of administrative law in labour law relations; the relation between the ECHR and the articles of the Constitution opens up new perspectives on the constitutional interpretation of freedoms and on the interaction between human rights, constitutional law and social law; and lastly, there is a growing influence of EU law and international treaty law (concerning trade) on social law. Can we, by looking at these developments, draw certain conclusions at a different and innovative level? The contributions were selected by an international working group of distinguished scholars from across Europe.

The Philosophy of Logical Mechanism M.H. Salmon, 2012-12-06 This work is divided into two parts. Part I contains sixteen critical essays by prominent philosophers and computer scientists. Their papers offer insightful, well-argued contemporary views of a broad range of topics that lie at the heart of philosophy in the second half of the twentieth century: semantics and ontology, induction, the nature of probability, the foundations of science, scientific objectivity, the theory of naming, the logic of conditionals, simulation modeling, the relationship between minds and machines, and the nature of rules that guide behavior. In this volume honoring Arthur W. Burks, the philosophical breadth of his work is thus manifested in the diverse aspects of that work chosen for discussion and development by the contributors to his *Festschrift*. Part II consists of a book-length essay by Burks in which he lays out his philosophy of logical mechanism while responding to the papers in Part I. In doing so, he provides a unified and coherent context for the range of problems raised in Part I, and he highlights interesting relationships among the topics that might otherwise have gone unnoticed. Part II is followed by a bibliography of Burks's published works.

Public Law Andrew Le Sueur, Maurice Sunkin, Jo Eric Khushf, Murkens, 2016 Public Law Text, Cases, and Materials explores how the law works in practice. The key institutions, legal principles, and conventions that underpin the public law of the UK are brought to life through the inclusion of extracts from key sources, which are explained and critiqued by the authors.

Self-Organizing Systems F. Eugene Yates, 2012-12-06 Technological systems become organized by commands from outside, as when human intentions lead to the building of structures or machines. But many natural systems become structured by their own internal processes: these are the self-organizing systems, and the emergence of order within them is a complex phenomenon that intrigues scientists from all disciplines. Unfortunately, complexity is ill-defined. Global explanatory constructs, such as cybernetics or general systems theory, which were intended to cope with complexity, produced instead a grandiosity that has now, mercifully, run its course and died. Most of us have become wary of proposals for an integrated, systems approach to complex matters; yet we must come to grips with complexity somehow. Now is a good time to reexamine complex systems to determine whether or not various scientific specialties can discover common principles or properties in them. If they do, then a fresh, multidisciplinary attack on the difficulties would be a valid scientific task. Believing that complexity is a proper scientific issue, and that self-organizing systems are the foremost example, R. Tomovic, Z. Damjanovic, and I arranged a conference (August 26-September 1,

1979) in Dubrovnik, Yugoslavia, to address self-organizing systems. We invited 30 participants from seven countries. Included were biologists, geologists, physicists, chemists, mathematicians, bio physicists, and control engineers. Participants were asked not to bring manu scripts, but, rather, to present positions on an assigned topic. Any writing would be done after the conference, when the writers could benefit from their experi ences there.

Actology Malcolm Torry,2020-07-08 Two streams run through the Western philosophical stream: one characterized by Being, beings, the unchanging, the static, and the unitary; and the other by Action, actions, the changing, the dynamic, and the diverse. The former might be represented by Parmenides, Plato, and much of what followed; the latter by Heraclitus, and by rather less of what followed. The book explores the Action stream as it wound its way through history, through Heraclitus, Plato, Aristotle, Hegel, Maurice Blondel, Henri Bergson, Pierre Teilhard de Chardin, process philosophy and theology, Geoffrey Studdert Kennedy, Ludwig Wittgenstein, and John Boys Smith. The journey enables us to create the beginnings of an actology: a way of seeing ourselves, the universe, and God in terms of actions in patterns rather than as beings that change. Such an actology offers a complete alternative narrative far more in tune with the diverse and rapidly changing world in which we live than the ontology that has shaped philosophy, theology, and much else for the past two thousand years.

The Routledge Companion to Media and Risk Bishnupriya Ghosh,Bhaskar Sarkar,2020-02-26 This collection presents new work in risk media studies from critical humanities perspectives. Defining, historicizing, and consolidating current scholarship, the volume seeks to shape an emerging field, signposting its generative insights while examining its implicit assumptions. When and under what conditions does risk emerge? How is risk mediated? Who are the targets of risk media? Who manages risk? Who lives with it? Who are most in danger? Such questions—the what, how, who, when, and why of risk media—inform the scope of this volume. With roots in critical media studies and science and technology studies, it hopes to inspire new questions, perspectives, frameworks, and analytical tools not only for risk, media, and communication studies, but also for social and cultural theories. Editors Bishnupriya Ghosh and Bhaskar Sarkar bring together contributors who elucidate and interrogate risk media’s varied histories and futures. This book is meant for students and scholars of media and communication studies, science and technology studies, and the interdisciplinary humanities, looking either to deepen their engagement with risk media or to broaden their knowledge of this emerging field.

The Intricacy of Languages Francesc Feliu,Olga Fullana,2019-10-15 If, as we believe, the history of languages is the history of the construction of an ideal artefact that permits a specific interpretation of the linguistic reality and helps to approve and assimilate a certain zone of diversity, enabling the accumulation of collective historical knowledge and making us identify it with a social community and a territory, then it must be agreed that languages are extremely complex entities. The new linguistic diversity that cultural globalisation and recent population movements have installed in most traditional linguistic territories has probably put the ideology of the national language into a state of crisis and, as a consequence, has made the ancient, intrinsic diversity of all languages visible, at least to the extent that this is still possible. Nowadays, then, the old linguistic diversity of dialects, of parlances, of local lexicons and the cultural forms that are reflected in these, of varieties and previously unsuccessful linguistic entities has been given a new opportunity in a world where the cohesion of societies and the welfare of citizens must be guaranteed using all available means. Looked at this way, the intricacy of languages may even open up an opportunity for local economic and social development.

The Practice of Research in Criminology and Criminal Justice Ronet D. Bachman,Russell K. Schutt,2023-01-20 The Practice of Research in Criminology and Criminal Justice, Eighth Edition continues to demonstrate the vital role research plays in criminal justice by integrating in-depth, real-world case studies with a comprehensive discussion of research methods. By pairing research techniques with practical examples from the field, Ronet D. Bachman and Russell K. Schutt equip students to critically evaluate and confidently conduct research. The Eighth Edition of this best-selling text covers new methods, such as visual criminology and photo voice, and expanded chapters with new sections on the importance of making sure samples, measurements, and methods are inclusive and sensitive to the diverse nature of our society. The authors refer to contemporary examples throughout, such as the increase in the use of social media, the continuing impact of the COVID-19 pandemic, mass participation in social movements including Black Lives Matter, increasing hate crimes across the globe, and increasing incidents of mass shootings in the U.S. This title is accompanied by a complete teaching and learning package.
