New Perspectives in Behavioral Cybersecurity

Wayne Patterson, 2023-09-27 New Perspectives in Behavioral Cybersecurity offers direction for readers in areas related to human behavior and cybersecurity, by exploring some of the new ideas and approaches in this subject, specifically with new techniques in this field coming from scholars with very diverse backgrounds in dealing with these issues. It seeks to show an understanding of motivation, personality, and other behavioral approaches to understand cyberattacks and create cyberdefenses. This book:

- Elaborates cybersecurity concerns in the work environment and cybersecurity threats to individuals.
- Presents personality characteristics of cybersecurity attackers, cybersecurity behavior, and behavioral interventions.
- Highlights the applications of behavioral economics to cybersecurity.
- Captures the management and security of financial data through integrated software solutions.

Paying for Performance in Healthcare: Implications for Health System Performance and Accountability Cheryl

Cashin, Y-Ling Chi, Michael Borowitz, Sarah

Thompson, 2014-09-16 Health spending continues to grow faster than the economy in most OECD countries. In 2010, the OECD published a study of strategies to increase value for money in health care, in which pay for performance (P4P) was identified as an innovative tool to improve health system efficiency in several OECD countries. However,

evidence that P4P increases value for money, boosts quality of processes in health care, or improves health outcomes is limited. This book explores the many questions surrounding P4P such as whether the potential power of P4P has been over-sold, or whether the disappointing results to date are more likely rooted in problems of design and implementation or inadequate monitoring and evaluation. The book also examines the supporting systems and process, in addition to incentives, that are necessary for P4P to improve provider performance and to drive and sustain improvement. The book utilises a substantial set of case studies from 12 OECD countries to shed light on P4P programs in practice. Featuring both high and middle income countries, cases from primary and acute care settings, and a range of both national and pilot programmes, each case study features: Analysis of the design and implementation decisions, including the role of stakeholders Critical assessment of objectives versus results Examination of the of 'net' impacts, including positive spillover effects and unintended consequences The detailed analysis of these 12 case studies together with the rest of this critical text highlight the realities of P4P programs and their potential impact on the performance of health systems in a diversity of settings. As a result, this book provides critical insights into the experience to date with P4P and how this tool may be better leveraged to improve health system performance and accountability. This title is in the European Observatory on Health Systems and Policies Series.

Forest management and the impact on water resources

García Chevesich, Pablo, Neary, Daniel G., Scott, David F., Benyon, Richard G., Reyna, Teresa, 2017-04-24 Trees have been around for more than 370 million years, and today there are about 80 thousand species of them,

occupying 3.5 billion hectares worldwide, including 250 million ha of commercial plantations. While forests can provide tremendous environmental, social, and economic benefits to nations, they also affect the hydrologic cycle in different ways. As the demand for water grows and local precipitation patterns change due to global warming, plantation forestry has encountered an increasing number of water-related conflicts worldwide. This document provides a country-by-country summary of the current state of knowledge on the relationship between forest management and water resources. Based on available research publications, the Editor-in-Chief of this document contacted local scientists from countries where the impact of forest management on water resources is an issue, inviting them to submit a chapter.

A Mandate of Sword and Railgun Black

Knight,2021-10-09 Fringe Space... It is where mighty pirate clans, powerful cartels and viciously territorial empires have set up shop. Humanity's fledgling star state, the Terran Minarchy, colonized a number of leftover planets in this expanse. The Humans, their allies, and client races have ventured forth, braved deadly space anomalies and settled there. They terraformed barren wastelands, brought water to the deserts, and transformed even the dead asteroids into tiny copies of Earth. However, their boldness and hard work were rewarded with relentless, unprovoked attacks. Terran settlers were denied the peace and prosperity they sought, and were instead rewarded with slavery and death. Forced to replace their tractors for battle tanks, these farmers now aim to harvest another type of crop - the invaders themselves!

Applied Missing Data Analysis Craig K.

Enders,2010-04-23 Walking readers step by step through complex concepts, this book translates missing data techniques into something that applied researchers and

graduate students can understand and utilize in their own research. Enders explains the rationale and procedural details for maximum likelihood estimation, Bayesian estimation, multiple imputation, and models for handling missing not at random (MNAR) data. Easy-to-follow examples and small simulated data sets illustrate the techniques and clarify the underlying principles. The companion website includes data files and syntax for the examples in the book as well as up-to-date information on software. The book is accessible to substantive researchers while providing a level of detail that will satisfy quantitative specialists. This book will appeal to researchers and graduate students in psychology, education, management, family studies, public health, sociology, and political science. It will also serve as a supplemental text for doctoral-level courses or seminars in advanced quantitative methods, survey analysis, longitudinal data analysis, and multilevel modeling, and as a primary text for doctoral-level courses or seminars in missing data.

Multiple Imputation for Nonresponse in Surveys

Donald B. Rubin,2009-09-25 Demonstrates how nonresponse in sample surveys and censuses can be handled by replacing each missing value with two or more

multiple imputations. Clearly illustrates the advantages of modern computing to such handle surveys, and demonstrates the benefit of this statistical technique for researchers who must analyze them. Also presents the background for Bayesian and frequentist theory. After establishing that only standard complete-data methods are needed to analyze a multiply-imputed set, the text evaluates procedures in general circumstances, outlining specific procedures for creating imputations in both the ignorable and nonignorable cases. Examples and exercises reinforce ideas, and the interplay of Bayesian and frequentist ideas presents a unified picture of modern statistics.
