*Doing Experimental Media Archaeology* Tim van der Heijden, Aleksander Kolkowski, 2022-12-31 In recent years, there has been a growing interest in the use of experimental approaches to the study of media histories and their cultures. Doing media archaeological experiments, such as historical re-enactments and hands-on simulations with media historical objects, helps us to explore and better understand the workings of past media technologies and their practices of use. By systematically reflecting on the methodological underpinnings of experimental media archaeology as a relatively new approach in media historical research and teaching, this book aims to serve as a practical handbook for doing media archaeological experiments. *Doing Experimental Media Archaeology: Practice* is the twin volume to *Doing Experimental Media Archaeology: Theory*, authored by Andreas Fickers and Annie van den Oever.

*Adaptive 3D Sound Systems* John Garas,2012-12-06 *Adaptive 3D Sound Systems* focuses on creating multiple virtual sound sources in 3D reverberant spaces using adaptive filters. Adaptive algorithms are introduced and explained, including the multiple-error filtered-x algorithm and the adjoint LMS algorithm. The book covers the physical, psychoacoustical, and signal processing aspects of adaptive and non-adaptive 3D sound systems. Included is an introduction to spatial hearing, sound localization and reverberation, frequency selectivity of the human auditory system, the state of the art in HRTF-based 3D sound systems, binaural synthesis, and loudspeaker displays. The adaptive approach to HRTF-based 3D sound systems is examined in detail for the general case of creating multiple virtual sound sources at the ears of multiple listeners in a reverberant 3D space. The derived solution can be applied to other applications, such as cross-talk cancellation, loudspeakers and room equalization, concert hall simulation, and active sound control. Several solutions for the problem of moving listeners are introduced. Strategies for enlarging the zones of equalization around the listeners' ears, correct loudspeakers positioning, and using multiresolution filters are proposed. Fast multiresolution spectral analysis using non-uniform sampling is developed for implementation of multiresolution filters. The well-focused topics, along with implementation details for adaptive algorithms, make *Adaptive 3D Sound Systems* suitable for multimedia applications programmers,

advanced level students, and researchers in audio and signal processing.
