The Fast and The Furious: Drivers, Speed Cameras and Control in a Risk Society Helen Wells, 2022-03-26

The Fast and The Furious: Drivers, Speed Cameras and Control in a Risk Society presents a sociological and criminological perspective critical to understanding the driver's role at the centre of road safety interventions. Such an approach is, it is argued, as crucial to an understanding of attempts to reduce road crashes, deaths and injuries as approaching such questions from an engineering or educational perspective. The book offers an explanation for the continued debate about one road safety intervention - the speed camera - by situating that debate within contemporary literature about the 'risk society' (Beck, 1992) and more broadly understood experiences of risk faced on a daily basis by drivers. Rather than a focus on risk as something that can be objectively assessed, measured and managed separately from the social context in which it is encountered, it suggests that 'risk' is something that permeates this particular debate from every angle. The book achieves its aims by utilising sociological and criminological perspectives to investigate issues such as: - the social context in which it is possible for drivers to reject official scientific expertise about crash causation and camera effectiveness - the self-defined 'respectability' of the population being problematised and its juxtaposition with a 'proper' police focus on 'real criminals' - the reconceptualisation of law-breaking as risk-taking rather than inherently 'wrong' behaviour and its consequences for the enforcement of laws based on risk assessment - the experience of being controlled by technology and of receiving what is essentially 'automated justice'. These and other issues are explored and suggested as illuminating of both the real concerns underpinning this debate and potentially instructive for future attempts to control risky behaviour both within and beyond a road safety context.

The Micro-World Observed by Ultra High-Speed Cameras Kinko Tsuji,2017-08-30 This volume is about ultra high-speed cameras, which enable us to see what we normally do not see. These are objects that are moving very fast, or that we just ignore. Ultra high-speed cameras invite us to a wonderland of microseconds. There Alice (the reader) meets a ultra high-speed rabbit (this volume) and travels together through this wonderland from the year 1887 to 2017. They go to the horse riding ground and see how a horse gallops. The rabbit takes her to a showroom where various cameras and illumination devices are presented. Then, he sends Alice into semiconductor labyrinths, wind tunnels, mechanical processing factories, and dangerous explosive fields. Sometimes Alice is large, and at other times she is very small. She sits even inside a car engine. She falls down together with a droplet. She enters a microbubble, is thrown out with a jet stream, and finds herself in a human body. Waking up from her dream, she sees children playing a game: "I see what you do not see, and this is....". Alice thinks: "The ultra high-speed rabbit showed me many things which I had never seen. Now I will go again to this wonderland, and try to find something new.

The 'Real Drivers' Guide to Beating the Speed Camera Thomas Heavey,2013-03-25 Do you really want protection from the speed camera? Have you ever thought about improving your own driving skills but didn't because of the time or expense? Would you like fewer people killed and injured on our roads? If the answer is 'YES' to all these questions then you're in the right place. There is no better protection from the speed camera and reducing casualties on our roads than the motorists own skill and judgement. Over the years we motorists have allowed our standards to slip which is why so many of us get caught out by speed cameras each year and why thousands are involved in serious, life

changing collisions, but it doesn't have to be this way. We can enjoy motoring without causing casualties and avoid punishment at the same time. So why 'Real Driver'? because we are going to use 'real driving' skills to beat the speed camera with not a gadget in sight. The 'Real Driving' exercises are going to take six weeks for you to master. Question is...are you up for the challenge?

Cost Benefit Analysis of Traffic Light & Speed Cameras Andrew Hooke,Jim Knox,David Portas,1996

Speed Management European Conference of Ministers of Transport,2006-10-13 Speeding is the number one road safety problem in a large number of OECD/ECMT countries. It is responsible for around one third of the current, unacceptably high levels of road fatalities. Speeding has an impact not only on accidents but also on the ...

Automated Enforcement for Speeding and Red Light Running Kimberly A. Eccles,2012 The goal of this research was to find out which automated enforcement programs have been successful and what contributed to their success, as well as which programs have been unsuccessful and to draw lessons from their experiences. This was accomplished through a comprehensive assessment of automated speed and red light running enforcement activity in the United States and Canada, which led to the development of guidelines to assist agencies in implementing and operating successful automated enforcement programs. Over 350 jurisdictions with current or past automated enforcement programs were contacted by survey and phone as part of the assessment. In addition to the survey, an extensive literature review was conducted to determine the effect of the programs, cost effectiveness, and resource requirements, and to get the perspective of the public.

Use of Speed and Red-light Cameras for Traffic Enforcement Great Britain: Department for

Transport, Great Britain: Department for Transport Staff, 2007-01-31 Safety cameras are an important part of an integrated road safety strategy, providing a cost-effective method of preventing, detecting and enforcing speed and traffic light offences, and encouraging safer driver behaviour. From April 2007, local authorities, the police and local partners will have greater freedom and flexibility to implement locally agreed road safety measures to reduce road casualties in their area, and this will include greater local accountability for the future deployment and operation of safety cameras. This Circular provides guidance and best practice advice on the deployment of speed and red-light cameras applicable in these circumstances after 1st April 2007. It supersedes Circular Roads 01/92 (Use of technology for traffic enforcement: guidance on deployment), Circular Roads 01/95 (Traffic signal and speed camera signing) and the Handbook for Rules and Guidance for the National Safety Camera Programme for England and Wales 2006/07, which are now cancelled.

Improvements to High Speed Rotating Prism Cameras Including on Board Timing and Event Pulse Generators Kenneth J. Lee, MATERIALS RESEARCH LABS ASCOT VALE (Australia), 1983 Details of modifications incorporated in a Hycam rotating prism high speed camera are reported here. The modifications, adaptable to most high speed cameras, include remote DC starting, an on board timing light generator and an event pulse generator. These and other modifications described have improved the performance, reliability and ease of operation of high speed cameras both in the laboratory and in the field. (Author).

Transport and Safety Geetam Tiwari, Dinesh Mohan, 2021-05-20 This volume addresses a variety of issues on traffic safety policy, ranging from issues of climate change, urban equity, and transport safety, in a broad global and societal context, while retaining situation-specific details. Written by international experts on issues of transportation and traffic safety, it will be of special interest to advanced researchers in the engineering and planning disciplines working on these issues as well as policy makers concerned with setting up institutions and legislations for traffic safety.

Ending the Scandal of Complacency Great Britain. Parliament. House of Commons. Transport Committee, 2008 Although road accident deaths have halved between 1958 and 2007 whilst the number of licensed motor vehicles and vehicle mileage covered increased by 400 per cent, the current rate of 3,000 deaths and 250,000 injuries is still an unacceptably high level. Road accidents are the largest single cause of death for people between the ages of 5 and 35 in Britain, and road accidents cost our economy some £18 billion each year. The number of deaths and injuries on roads far outweighs the deaths and injuries in other transport modes, and should be viewed as a major public health problem. The Government should establish a British Road Safety Survey to track overall casualty and safety trends, and review current methods for recording road-traffic injuries. The Committee recommends a systems approach to road safety: ensuring the vehicle, the road infrastructure, regulations and driver training are designed to similar safety and performance standards. Other recommendations include: more 20 mph speed limits; a more proactive approach to determining the safety benefits of new vehicle technologies; action on young drivers - who represent a disproportionate risk to road users - and vulnerable users: motorcyclists, elderly and child pedestrians and cyclists, horse riders; a higher priority given to enforcement of drink-drive and drug-

drive offences. The Committee recommends the establishment of an independent Road Safety Commission with powers to work across the whole of government, ensuring that a high priority and adequate resources are given to road safety and that all government departments and agencies give active support. The Government should also establish a road accident investigation branch, like those in aviation, rail and marine.

Behavioural Adaptation and Road Safety Christina Rudin-Brown, Samantha Jamson, 2013-05-24
Despite being an accepted construct in traffic and transport psychology, the precise nature of behavioural adaptation, including its causes and consequences, has not yet been established within the road safety community. A comprehensive collection of recent literature, *Behavioural Adaptation and Road Safety: Theory, Evidence, and Action* explores behavioural adaptation in road users. It examines behavioural adaptation within the context of historical and theoretical perspectives, and puts forth tangible—and practical—solutions that can effectively address adverse behavioural adaptation to road safety interventions before it occurs. Edited by Christina Rudin-Brown and Samantha Jamson, with chapters authored by leading road safety experts in driver psychology and behaviour, the book introduces the concept of behavioural adaptation and details its more relevant issues. It reviews the definition of behavioural adaptation that was put forward by the OECD in 1990 and then puts this definition through its paces, identifying where it may be lacking and how it might be improved. This sets the context for the remaining chapters which take the OECD definition as their starting points. The book discusses the various theories and models of behavioural adaptation and more general theories of driver behaviour developed during the last half century. It provides examples of the evidence for behavioural adaptation—instances in which behavioural adaptation arose as a consequence of the introduction of safety countermeasures. The book then focuses on the

internal, human element and considers countermeasures that might be used to limit the development of behavioural adaptation in various road user groups. The book concludes with practical tools and methodologies to address behavioural adaptation in research and design, and to limit the potential negative effects before they happen. Supplying easy-to-understand, accessible solutions that can be implemented early on in a road safety intervention's design or conception phase, the chapters represent the most extensive compilation of literature relating to behavioural adaptation and its consequences since the 1990 OECD report. The book brings together earlier theories of behavioural adaptation with more recent theories in the area and combines them with practical advice, methods, and tangible solutions that can minimise the potential negative impact of behavioural adaptation on road user safety and address it before it occurs. It is an essential component of any road safety library, and should be of particular relevance to researchers, practitioners, designers, and policymakers who are interested in maximizing safety while at the same time encouraging innovation and excellence in road transport-related design.

Advances in Human Aspects of Transportation: Part I Neville Stanton, Giuseppe Di Bucchianico, Andrea Vallicelli, Steven Landry, 2021-07-19 Human Factors and Ergonomics have made a considerable contribution to the research, design, development, operation and analysis of transportation systems which includes road and rail vehicles and their complementary infrastructure, aviation and maritime transportation. This book presents recent advances in the Human Factors aspects of Transportation. These advances include accident analysis, automation of vehicles, comfort, distraction of drivers (understanding of distraction and how to avoid it), environmental concerns, in-vehicle systems design, intelligent transport systems, methodological developments, new systems

and technology, observational and case studies, safety, situation awareness, skill development and training, warnings and workload. This book brings together the most recent human factors work in the transportation domain, including empirical research, human performance and other types of modeling, analysis, and development. The issues facing engineers, scientists, and other practitioners of human factors in transportation research are becoming more challenging and more critical. The common theme across these sections is that they deal with the intersection of the human and the system. Moreover, many of the chapter topics cross section boundaries, for instance by focusing on function allocation in NextGen or on the safety benefits of a tower controller tool. This is in keeping with the systemic nature of the problems facing human factors experts in rail and road, aviation and maritime research- it is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment, but as embedded issues that can only be understood as a part of an overall system.
