Dean Rader,Janice Gould

The Unexpected Hanging and Other Mathematical Diversions Martin Gardner,2020-10-06 Martin Gardner's Mathematical Games columns in Scientific American inspired and entertained several generations of mathematicians and scientists. Gardner in his crystal-clear prose illuminated corners of mathematics, especially recreational mathematics, that most people had no idea existed. His playful spirit and inquisitive nature invite the reader into an exploration of beautiful mathematical ideas along with him. These columns were both a revelation and a gift when he wrote them; no one--before Gardner--had written about mathematics like this. They continue to be a marvel. This volume, first published in 1969, contains columns published in the magazine from 1961-1963. This is the 1991 edition and it contains an afterword and extended bibliography added by Gardner at that time.

Citadel of the Stars Aaron Simons,2021-06-14 Citadel of the Stars By: Aaron Simons In the spring of 1994, Jim and Tina are nonconformists with the strongest relationship imaginable. They turn eighteen, are about to graduate, go onto college, and have their lives ahead of them. But the next day, Tina goes missing... Five years later, Jim's life has almost completely fallen apart. Tina's parents have moved, he lost his family in a car accident, and he feels his life's about to lose everything. He's with the dog Tina gave him on their birthday and her cat when he decides to give up hope... Then Jim, the dog, and the cat are brought to the magical world where Tina has been lost. She tells him that she had been abducted by a highly advanced civilization called Pralmist in a parallel dimension. But something went wrong, and she ended up on another world called Maylan, unique in that its reality is everyone has powers that humans only read about in comic books... Now, the Pralmistians are able to transport their armies to other dimensions and have invaded looking for Tina and to bring Maylan under their control. But there is a prophecy that when a woman from an unknown world appears, her abductors will invade. They must bring the Chosen One, the woman's one true love, to Maylan... Facing overwhelming odds, Jim, Tina, and the Maylan Warriors must go on a journey to find the four Sacreida Stones to form the Sacreida Sword, the one weapon on Maylan that can destroy the Pralmistians. Can a peaceful agrarian warrior society lead by a man with no military training bring an entire world together and lead them against the Pralmistians, whose army has completely conquered their entire universe?

Rough Guide to the Universe John Scalzi,Rough Guide,2008-05-01 Whether you're a novice or a more experienced astronomer, The Rough Guide to The Universe is indispensable. The truth may or may not be out there, but space is the place to look, and the Rough Guide to the Universe takes it all in, from our own moon to the furthest frontiers of the known universe - and then speculates about what lies beyond. This fascinating guide is not meant to delve too deeply; instead it gives the reader the grounding needed to appreciate the night sky. Clue- up on the basics with concise information on every planet in the solar system, and practical advice on observing the planets and stars with binoculars, telescopes and the naked eye. You'll find the latest theories about how the universe came to exist, incisive explanations of the formation of galaxies and weird concepts such a dark matter, wormholes and superstrings. The guide also provides travel-based information on planetariums, observatories and 'deep sky' sites as well as listings of star clubs, space news sources and other Internet resources. With dozens of photographs and star charts of every constellation, The Rough Guide to the Universe is The Stargazer's essential handbook

The Troyuan Chronicles... Book Two Ernest Velon,2005-08-23 We look back, through the fathoms of past ages, to the Classical Times when all Amazia sang the song of achievements. With inner envy and a hammer blow from the subconscious, backlash of tears and torment, crying how can this have happened? Where did we go wrong? Like a parent, whose child has gone astray, we weep over the wreckage of what once was, and only dream, of what could have been. As we ponder through the ages embedded in the decaying Imperial Archives, my wife and I discover the cache of data crystals. Once lost, or forgotten, buried within the ruins of the Capital Areas infrastructure, we now bring to light the sagas of a lost world. Such wondrous times are embodied within, we sing of a freshness never felt! Of a remarkable Young Man, Alack Troyus and his mission to fight crime and injustice from the Special Services. His adventures span the entire length and depth of an age long ago, forgotten. Fighting the evils of a brave new Empire, a true hero we of these dreary days only dream about in a child's apprehension. The passage of time is relentless, unyielding, a constant beating of the elements against our fragile memories. But here, in the dimness of these ruins, the glory is revealed and the truth once again shines forth! Amazia, her Society, her government and servants, the vitality is reborn in the tales. Such stories of youthful energy, where all of stellar creation is a playing field for Alack Troyus, going recklessly forward, never stumbling, but always landing on his feet. His voice, once only a silent whisper, now a shout bridging the ages, circling the fallen pediments, they rise up in grandeur, restored, as the tales live again! Ernest Velon Larentia, 9814 U.C.

Manifold: Space Stephen Baxter,2003-12-16 “As always, [Stephen] Baxter plays with space and time with consummate skill. . . . He continues to be one of the leading writers of hard science fiction, and one of the most thought-provoking as well.”—Science Fiction Chronicle The year is 2020. Fueled by an insatiable curiosity, Reid Malenfant ventures to the far edge of the solar system, where he discovers a strange artifact left behind by an alien civilization: A gateway that functions as a kind of quantum transporter, allowing virtually instantaneous travel over the vast distances of interstellar space. What lies on the other side of the gateway? Malenfant decides to find out. Yet he will soon be faced with an impossible choice that will push him beyond terror, beyond sanity, beyond humanity itself. Meanwhile on Earth the Japanese scientist Nemoto fears her worst nightmares are coming true. Startling discoveries reveal that the Moon, Venus, even Mars once thrived with life—life that was snuffed out not just once but many times, in cycles of birth and destruction. And the next chilling cycle is set to begin again . . . “When the travel bug bites and usual planets don’t excite, perhaps it’s time to burst the bounds of this old solar system and really see the sights. . . . Baxter’s expansive new novel is just the ticket.”—The Washington Times “Breathtaking in its originality and scope.”—The Washington Post

The Unexpected Hanging Martin Gardner,1969

A guide to astromomical science Robert James Mann,1856

Speak to Me Words Dean Rader,Janice Gould,2003-11-01 Although American Indian poetry is widely read and discussed, few resources have been available that focus on it critically. This book is the first collection of essays on the genre, bringing poetry out from under the shadow of fiction in the study of Native American literature. *Speak to Me Words* is a stimulating blend of classic articles and original pieces that reflect the energy of modern American Indian literary studies. Highlighting various aspects of poetry written by American Indians since the 1960s, it is a wide-ranging collection that balances the insights of Natives and non-Natives, men and women, old and new voices. Included here are such landmark articles as *Answering the Deer* by Paula Gunn Allen, *Herbs of Healing* by Carter Revard, and *Song, Poetry and Language—Expression and Perception* by Simon Ortiz—all pieces that have shaped how we think about Native poetry. Among the contributions appearing for the first time are Elaine Jahner writing on Paula Gunn Allen's use of formal structures; Robert Nelson addressing pan-Indian tropes of emergence, survival, return, and renewal; and Janet McAdams focusing on Carter Revard's angled mirrors. Although many Native writers may disregard distinctions between genres, together these writings help readers see the difference between American Indian poetry and other forms of Native literature. These essays are as broad, encompassing, and provocative as Native poetry itself, branching off from and weaving back into one another. In showing how American Indian poetry redefines our social order and articulates how Indian communities think about themselves, these writers establish a new foundation for the study—and enjoyment—of this vital art.

Organizations and Strategies in Astronomy Andre HECK,2013-06-05 Anyone who doubts that astronomy is enjoying a golden age has only to browse the pages of *Organizations and Strategies in Astronomy*, Vol. 5. Our golden age is defined not only by the enormity of new discoveries of dark energy, dark matter, extra-solar planets, and the evolution of Mars, but also by the breadth, diversity, and creativity within our community. This volume records our history, in a period of such rapid change and growth that individual astronomers are hard-pressed to keep abreast of their own fields and neighborhoods, much less of developments world-wide. Since the 1950's, changes in the landscape of astronomy are manifold. We have witnessed two epochs of big telescope construction, the 4-meter class telescopes of the '60s and '70s and the 8-to 10-meter class telescopes of the '90s, continuing through today. We accomplished the transition from photographic to digital data, and we continue to improve the size and sensitivity of astronomical detectors. We have witnessed the flowering of radio astronomy and the opening of the full electromagnetic spectrum through space astronomy. We have seen the growth of national and international astronomy facilities, and a dramatic broadening of the accessibility of data, both through observing facilities available through open competition based on scientific merit and through deep, rich archives of data.
