GWR Collett Castle Class Keith Langston,2015-03-30 The 'Castle' class 4-6-0 locomotives designed by Charles Collett and built at Swindon Works were the principal passenger locomotives of

the Great Western Railway. The 4-cylinder locomotives were built in batches between 1923 and 1950, the later examples being constructed after nationalisation by British Railways. In total 171 engines of the class were built and they were originally to be seen at work all over the Great Western Railway network, and later working on the Western Region of British Railways. The highly successful class could be described as a GWR work in progress, because further development took place over almost all of the locomotives working lives. In addition to inspiring other locomotive designers the 'Castle' class engines were proved to be capable of outstanding performances, and when introduced were rightly described as being 'Britain's most powerful passenger locomotives'. Some of the 'Castles' survived in service for over 40 years, and individually clocked up just a little short of 2 million miles in traffic. In this book, Keith Langston provides a definitive chronological history of the iconic class together with archive photographic records of each GWR 'Castle' locomotive. Many of the 300 plus images are published for the first time. In addition background information on the origin of the names the engines carried, including details of the many name changes which took place, are also included. The extra anecdotal information adds a fascinating glimpse of social history. Collett CASTLE Class is a lavishly illustrated factual reference book which will delight steam railway enthusiasts in general and in particular those with a love of all things Great Western!

A Steam Engine Pilgrimage Anthony Burton, 2017-02-28 Anthony Burton has traveled from the Highlands of Scotland, to the south west of England in pursuit of his passion for the steam engine in all its different forms. He has traveled on narrow gauge railways in Wales and enjoyed the splendor of main line journeys behind some of the grandest locomotives ever built. He has shoveled coal into the boiler of an old Clyde Puffer, while steaming down Scotlands west coast, and luxuriated in the

elegance of a Windermere steam launch. He has marveled at the magnificence of the great Victorian pumping engines and their elaborately decorated engine houses and spends time every year helping to oil and polish an old mill engine to get it ready to receive visitors. He has reveled in the fun of the steam fair and shared a ride in a replica of Richard Trevithicks extraordinary steam carriage with a direct descendant of the great engineer. All these experiences and more are brought together in this lively narrative, in which the author shares his own sense of excitement and places each visit within its historical context. Above all, this book is a tribute to all those anonymous volunteers whose hard work and dedication have kept this great tradition alive.

The Grand Finale of British Steam Alan Carson,2013-12-01 The year of 1968 was a pivotal year in a period of great change and, with the march of so-called progress that included man being a matter of months away from walking on the moon, the time was up for steam. The first week of August was to see the closure of the final three depots - effectively drawing to a conclusion the century and a half of loyal service provided by a form of transport to which the wealth of our nation owed so much. The steam era ended so poignantly on the 4th of August, a day on which innumerable steam railwaymen, most of whom had dedicated their entire lives to the railways, were declared

redundant. This fascinating book chronicling the last months of steam on the British Railways main line is a tribute to those final men and machines. Years of painstaking research by Alan Castle, who viewed the proceedings at first hand 40 years ago, and interviews with drivers, firemen and engine shed staff, have resulted in this authoritative and definitive account of the year in which the final whistle sounded on a steam era dating back more than 150 years.
