Internet of Things (IoT) BK Tripathy,J Anuradha,2017-10-10 The term IoT, which was first proposed by Kevin Ashton, a British technologist, in 1999 has the potential to impact everything from new product opportunities to shop floor optimization to factory worker efficiency gains, that will power top-line and bottom-line gains. As IoT technology is being put to diversified use, the current technology needs to be improved to enhance privacy and built secure devices by adopting a security-focused approach, reducing the amount of data collected, increasing transparency and providing consumers with a choice to opt out. Therefore, the current volume has been compiled, in an effort to draw the various issues in IoT, challenges faced and existing solutions so far. Key Points: • Provides an overview of basic concepts and technologies of IoT with communication technologies ranging from 4G to 5G and its architecture. • Discusses recent security and privacy studies and social behavior of human beings over IoT. • Covers the issues related to sensors, business model, principles, paradigms, green IoT and solutions to handle relevant challenges. • Presents the readers with practical ideas of using IoT, how it deals with human dynamics, the ecosystem, the social objects and their relation. • Deals with the challenges involved in surpassing diversified architecture, protocol, communications, integrity and security.

Youth Media Matters Korina M. Jocson,2018-01-15 In an information age of youth social movements, Youth Media Matters examines how young people are using new media technologies to tell stories about themselves and their social worlds. They do so through joint efforts in a range of educational settings and media environments, including high school classrooms, youth media organizations, and social media sites. Korina M. Jocson draws on various theories to show how educators can harness the power of youth media to provide new opportunities for meaningful learning and "do-it-together production." Describing the impact that youth media can have on the broader culture, Jocson demonstrates how it supports expansive literacy practices and promotes civic engagement, particularly among historically marginalized youth. In Youth Media Matters, Jocson offers a connective analysis of content area classrooms, career and technical education, literary and media arts organizations, community television stations,

and colleges and universities. She provides examples of youth media work—including videos, television broadcasts, websites, and blogs—produced in the San Francisco Bay Area, Los Angeles, New York, and St. Louis. At a time when educators are increasingly attentive to participatory cultures yet constrained by top-down pedagogical requirements, Jocson highlights the knowledge production and transformative potential of youth media with import both in and out of the classroom.

The papers selected to be included in this book contribute to the understanding of relevant trends of current research on and future directions of information technology for management in business and public organizations. They were organized in topical sections named: information technology assessment for future development; methods and models for designing information technology, and aspects of implementing information technology.

The Internet of Intelligent Things Dave Evans,2020-06-18 Have you ever wondered how the technology that is shaping our world works?From mainstream technologies such as computing and the Internet, to emerging technologies such as artificial intelligence and quantum computing, it is no secret that the world is heavily influenced by technology. Yet, the technology that we depend upon is often not fully understood by those not specialized in the field.Books about technology can intimidating. This book has been written to be approachable and easy to understand. It provides an introduction to a host of technologies and trends that explain our technological present and our technological future. It attempts to strike a balance between providing educational content, but in plain language with a little bit of prognostication thrown in for good measure.There is a constant barrage of new technologies but the plain language that describes them as well as their implications is often illusive. And, with these new technologies come new questions. Will there be a robot uprising? Will we be able to grow enough food in the future? Should I be worried about my privacy? What is artificial intelligence anyway? Will we ultimately merge with technology?While this book touches on many of the technical aspects of these technologies, it has been written to be approachable and does not presuppose a deep technical background on behalf of the reader.The book starts with a day in the life of Sally, who lives a few years in the future. It then goes on to explain the technologies that brought us to this point as well as those that will create that future. Set against the backdrop of two colliding technologies - artificial intelligence and the Internet of Things, this book explores and educates the reader on a host of technologies that are transforming the world.From the background and history that brought us to this point, to the technologies driving this transformation, to the implications it will have for humanity and the opportunities it will provide, this book explores this coming era.About the author: I have spent my career in the technology field and have traveled the globe talking to executives, organizations, students, and the press about technology trends and their impact on our lives. A consistent question is always posed - where can I learn more about these topics? I decided to write a book that I could not find. One rich with information about the technologies that are shaping our lives, but most importantly, a book that was approachable, and easy to read. I have lived in Silicon Valley most of my life and have worked in large technology companies as well as start-ups. I have worn many hats, from engineer to CTO, entrepreneur to professor, programmer to CIO, and even a futurist. I love technology and hold numerous patents in fields such as the Internet of Things (IoT), connected cars, networking technologies, virtual people, mobile phone technologies, virtual spaces, and more. But, most of all I care about how technology is used to improve the human condition. My views have been shared by Forbes, Fortune, CIO Magazine, Financial Times, The BBC, CNN, Tech Crunch, Politico, San Jose Mercury News, Computer World, New York Times, Nihon Keizai Shimbun, Nikkei Business, Silicon Valley Business Journal, Business Insider, MSNBC, Discovery Channel, History Channel, InfoWeek, Gigaom, MarketWatch, ReadWriteWeb, Mashable, TMCnet, and countless others as well as through a very active social media presence
