The Planets Dava Sobel, 2006-10-31 Dava Sobel's *The Glass Universe* will be available from Viking in December 2016 With her bestsellers *Longitude* and *Galileo's Daughter*, Dava Sobel introduced readers to her rare gift for weaving complex scientific concepts into a compelling narrative. Now Sobel brings her full talents to bear on what is perhaps her most ambitious topic to date-the planets of our solar system. Sobel explores the origins and oddities of the planets through the lens of popular culture, from astrology, mythology, and science fiction to art, music, poetry, biography, and history. Written in her characteristically graceful prose, *The Planets* is a stunningly original celebration of our solar system and offers a distinctive view of our place in the universe. * A New York Times extended bestseller * A Featured Alternate of the Book-of-the-Month Club, History Book Club, Scientific American Book Club, and Natural Science Book Club * Includes 11 full-color illustrations by artist Lynette R. Cook [The Planets] lets us fall in love with the heavens all over again. -The New York Times Book Review Playful . . . lyrical . . . a guided tour so imaginative that we forget we're being educated as we're being entertained. -Newsweek [Sobel] has outdone her extraordinary talent for keeping readers enthralled. . . . Longitude and Galileo's Daughter were exciting enough, but *The Planets* has a charm of its own . . . A splendid and enticing book. -San Francisco Chronicle A sublime journey. [Sobel's] writing . . . is as bright as the sun and its thinking as

star-studded as the cosmos. -The Atlanta Journal-Constitution An incantatory serenade to the Solar System. Grade A- -Entertainment Weekly Like Sobel's [Longitude and Galileo's Daughter] . . . [The Planets] combines masterful storytelling with clear, engaging explanations of the essential scientific facts. -Physics World

revolve around the Sun, in a text that includes

The Planets Giles Sparrow, 2008 For millennia the planets have fascinated mankind. But only in the last 40 years have those wandering points of light in the night sky been revealed in all their glory, unmasked by a fleet of satellites and interplanetary probes: Cassini, Deep Space I, Galileo, Hubble Space Telescope, Magellan, Mariner, Mars Global Surveyor, NEAR Shoemaker, Stardust, SOHO, TRACE, Viking, and Voyagers I & II, to name but a few. And the closer we look, the more wonderful they are: Venus' clouds are laced with sulphuric acid; water once flowed over Mars' deserts; on Jupiter wind speeds reach 10,000 kph (6,000 mph) and storms rage for centuries; Saturn is surrounded by a swarm of 34 moons; and diamonds rain from Neptune's skies. Moving out from the Sun, every planet and moon is visited in a journey that takes us a full light year out into space, to the very fringes of the solar system where the Sun is no longer the brightest star in the sky. With nearly 200 spectacular images, *The Planets* follows the tracks of robotic rovers over Mars, plunges through Titan's atmosphere on the back of the Huygens probe, smashes into a comet with Deep Impact, and discovers the frozen planets that lurk at the edge of our solar system, beyond the orbit of Neptune.

The Planets Nirmala Nataraj,2017-11-07 "Might be just the book to bring out your inner astronomer . . . over 250 pages of breathtaking images from the past 50 years of NASA's space exploration."

—Parade Preface by Bill Nye This magnificent volume offers a rich visual tour of the planets in our solar system. More than two-hundred breathtaking photographs from the archives of NASA are paired with extended captions detailing the science behind some of our cosmic neighborhood's most extraordinary phenomena. Images of newly discovered areas of Jupiter, fiery volcanoes on Venus, and many more reveal the astronomical marvels of space in engrossing detail. Anyone with an interest in science, astronomy, and the mysteries of the universe will delight in this awe-inspiring guide to the wonders of the solar system. "As you turn through the pages, you're hit with true moments of awe, photos that remind you the power of nature extends beyond our own planet." —Houston Chronicle "Breathtaking pictures show the otherworldly magic of the solar system . . . The images are at once humbling and uplifting:

Here in the black void of space is Saturn's frozen moon, Mimas, white and pitted like a galactic golf ball; here is the tiny golden orb called Io, casting a shadow in a perfect inky circle on the marbled surface of Jupiter; here is the great sun, flames spurting from its surface like plumes."

—The Wall Street Journal "[A] gorgeous photographic tour of space . . . The collection is a remarkable reminder of how much has been learned about the planets over the past few decades, solving many mysteries yet introducing many more."
—Publishers Weekly
