Pegasus Laurent Richard,Sandrine Rigaud,2023-01-17 Featuring an introduction by Rachel Maddow, Pegasus: How a Spy in Our Pocket Threatens the End of Privacy, Dignity, and Democracy is the behind-the-scenes story of one of the most sophisticated and invasive surveillance weapons ever created, used by governments around the world. Pegasus is widely regarded as the most effective and sought-after cyber-surveillance system on the market. The system's creator, the NSO Group, a private corporation headquartered in Israel, is not shy about proclaiming its ability to thwart terrorists and criminals. "Thousands of people in Europe owe their lives to hundreds of our company employees," NSO's cofounder declared in 2019. This bold assertion may be true, at least in part, but it's by no means the whole story. NSO's Pegasus system has not been limited to catching bad guys. It's also been used to spy on hundreds, and maybe thousands, of innocent people around the world: heads of state, diplomats, human rights defenders, political opponents, and journalists. This spyware is as insidious as it is invasive, capable of infecting a private cell phone without alerting the owner, and of doing its work in the background, in silence, virtually undetectable. Pegasus can track a person's daily movement in real time, gain control of the device's microphones and cameras at will, and capture all videos, photos, emails, texts, and passwords—encrypted or not. This data can be exfiltrated, stored on outside servers, and then leveraged to blackmail, intimidate, and silence the victims. Its full reach is not yet known. "If they've found a way to hack one iPhone," says Edward Snowden, "they've found a way to hack all iPhones." Pegasus is a look inside the monthslong worldwide investigation, triggered by a single spectacular leak of data, and a look at how an international consortium of reporters and editors revealed that cyber intrusion and cyber surveillance are happening with exponentially increasing frequency across the globe, at a scale that astounds. Meticulously reported and masterfully written, Pegasus shines a light on the lives that have been turned upside down by this unprecedented threat and exposes the chilling new ways authoritarian regimes are eroding key pillars of democracy: privacy, freedom of the press, and freedom of speech.

Combating Security Challenges in the Age of Big Data Zubair Md. Fadlullah,Al-Sakib Khan Pathan,2020-05-26 This book addresses the key security challenges in the big data centric computing and network systems, and discusses how to tackle them using a mix of conventional and state-of-the-art techniques. The incentive for joining big

data and advanced analytics is no longer in doubt for businesses and ordinary users alike. Technology giants like Google, Microsoft, Amazon, Facebook, Apple, and companies like Uber, Airbnb, NVIDIA, Expedia, and so forth are continuing to explore new ways to collect and analyze big data to provide their customers with interactive services and new experiences. With any discussion of big data, security is not, however, far behind. Large scale data breaches and privacy leaks at governmental and financial institutions, social platforms, power grids, and so forth, are on the rise that cost billions of dollars. The book explains how the security needs and implementations are inherently different at different stages of the big data centric system, namely at the point of big data sensing and collection, delivery over existing networks, and analytics at the data centers. Thus, the book sheds light on how conventional security provisioning techniques like authentication and encryption need to scale well with all the stages of the big data centric system to effectively combat security threats and vulnerabilities. The book also uncovers the state-of-the-art technologies like deep learning and blockchain which can dramatically change the security landscape in the big data era.

Gender Security And International Politics DR. AURORA MARTIN ,DR. NANDINI BASISTHA ,2023-09-03 This book contains thirty-three Best Paper Award-winning articles presented in the IIHSG International Conference 2021 on Gender Security and Global Politics organised by Interdisciplinary Institute of Human Security & Governance (previously Indian Institute of Human Security & Governance), Delhi in collaboration with the Centre for International Studies and Diplomacy, School of Oriental and African Studies, University of London & Department of International Relations, University of Chittagong, Bangladesh. Around 450 gender security experts presented paper in this virtual event from 20 countries. 'Security' is a contested concept in global politics especially International Relations. Security often treated as a sole property of 'masculinized' politics of 'realism'. But, 'security' and 'gender' both the terms has multifaceted usage. If 'insecurity' can be understood by 'vulnerability', then, you might agree that every 'gender' is vulnerable in pandemic time as it affected both physical and mental security of every individual irrespective of race, region or religion. This book, Gender Security & Global Politics tries to address various contemporary security issues in global arena through gendered lenses – like Gender Security: Theoretical Debate; Gender Security and Law; Gender Security and Governance; Gender Security & Labour Force; Gender Security & Political Economy; Gender Security and Sustainable Development; Non-Governmental Gender Security Measures; Global Agencies for Gender Security; Global Parameters for Gender Security; Gender Security in Domestic Sphere; Child Security Threats: Recent Trends and Gender Security and Pandemic: Recent Trends. I hope that this collection of essays can become a benchmark for the future as well as spur new research agendas and projects that will put the region into a much-needed conversation on the recent trends of gender security in world politics. The volume is essential reading for social scientists, bureaucrats and non-governmental political activists interested in gender security. It will also appeal to public policy analysts and scholars who have yet to adopt the contribution of critical security and development studies in the analysis of different dimensions of gender security.

Startup Cities Peter S. Cohan,2018-02-07 This book offers a comprehensive model for explaining the success and failure of cities in nurturing startups, presents detailed case studies of how participants in that model help or hinder startup activity, and shows how to apply these lessons to boost local startup activity. Startup Cities explains the factors that determine local startup success based on a detailed comparison of regional startup cities—pairing the most successful and less successful cities within regions along with insights and implications from case studies of each of the model's elements. The book compares local city pairs, highlighting factors that distinguish successful from less successful cities and presents implications for stakeholders that arise from these principles. Peter Cohan is a lecturer of Strategy at Babson College and one of the world's leading authorities on regional startup ecosystems. Starting in 2012, he created and led Startup Strategy courses that explore four regional startup ecosystems—Hong Kong/Singapore, Israel, Paris, and Spain/Portugal. These courses are based on an original framework for evaluating why a few cities host most startup creation and the rest fail to do so. In running these courses, Peter has built a network of local policymakers, investors, entrepreneurs, and professors from which he draws practical insights for what distinguishes successful Startup Commons from their peers. The book provides vital benefits to these stakeholders. What You'll Learn Local policymakers will know how to build a local team to set objectives for their local Startup Commons and develop a comprehensive strategy to realize those goals Entrepreneurs will know how to choose where to locate their startups based on factors such as the supply and quality of talent—from chief marketing and technology officers to coders and sales people; quality of life, access to capital, customers, and mentors; and costs such as salary and real estate expense University administrators and faculty will know how to take research out of their labs and house it in companies that can commercialize that research, create academic programs that will encourage more entrepreneurship among their students, and connect with local policymakers and capital providers to spur local startup activity Capital providers will know how to scout out emerging startup cities where they can get access to the best investment opportunities at more favorable valuations and have greater influence on how the local startup scene evolves Who This Book Is For All key startup stakeholders, including local policymakers (mayors, directors of economic development, treasurers, controllers, presidents of regional chamber of commerce), entrepreneurs (CEOs, chief marketing officers, chief financial officers, chief HR officers, chief technology officers), universities (presidents; deans of faculty; provosts; professors of finance, management, and entrepreneurship; directors of international education), and capital providers (venture capital partners and associates, angel investors, bank loan officers, managers of accelerator operations)

Cyber War and Cyber Peace Eliza Campbell,Michael Sexton,2022-06-02 The Middle East is the region in which the first act of cyber warfare took place. Since then, cyber warfare has escalated and has completely altered the course of the MENA region's geopolitics. With a foreword by top national security and cyber expert, Richard A. Clarke, this is the first anthology to specifically investigate the history and state of cyber warfare in the Middle East. It gathers an array of technical practitioners, social science scholars, and legal experts to provide a panoramic overview and cross-sectional analysis covering four main areas: privacy and civil society; the types of cyber conflict; information and influence operations; and methods of countering extremism online. The book highlights the real threat of hacktivism and informational warfare between state actors and the specific issues affecting the MENA region. These include digital authoritarianism and malware attacks in the Middle East, analysis of how ISIS and the Syrian electronic army use the internet, and the impact of disinformation and cybercrime in the Gulf. The book captures the flashpoints and developments in cyber conflict in the past 10 years and offers a snapshot of the region's still-early cyber history. It also clarifies how cyber warfare may develop in the near- to medium-term future and provides ideas of how its greatest risks can be avoided.
