Typing Master Jolanda Hemauer,2021-08-11 Touch typing is typing without looking at the keyboard. The fundamental idea is that each finger is given its section of the keyboard and your fingers learn the location of the keyboard through practicing regularly and gaining muscle memory to eventually build up speed whilst typing. Learning to touch-type with this method takes only 10 hours. You will reap the benefits for a lifetime, whether you are using a keyboard at work or home. The easy-to-use lessons are provided into manageable one-hour blocks and there are plenty of exercises to consolidate what you have learned. And touch-typing is a skill that can make you money as well as saving you time.

requires a plan, faithfully executed, with your eye relentlessly on the goal, but if you commit, it works. .. The Challenge of Teaching Gretchen Geng,Pamela Smith,Paul Black,2016-10-11 This book presents thirty-one accounts by final-year pre-service teachers, providing guidance and insights for less advanced teacher education students, and illustrating the use of life history and narrative stories as methods for pre-service teachers to explore educational issues in classroom practice. This life-history approach identifies those political, economic, and social forces that have impinged on the individual at different points in their life and contributed to the process of changing their identities. These stories are not written by established specialists in the areas they deal with, but instead by novice teachers at the beginning of their paths towards mastering the intricacies of teaching and

learning in school settings. As such the book provides a mentoring framework and a means of helping pre-service teachers share their valuable experiences and insights into aspects such as how to manage practicum requirements. It helps establish a supportive relationship among pre-service teachers, providing them with access to valuable peer experiences. In addition it helps pre-service teachers make sense of their own practicum experiences and reflect on their own beliefs and professional judgement to develop their approaches and solve problems in their own classroom practice.

Who Do You Think You Are? Tina Thomas,2016-01-26 "Step aside Dr. Phil; move over Dr. Oz. I truly believe that Dr. Tina Thomas is to personality psychology what Einstein was to physics . . ." (Eric Schulze, MD, PhD, researcher, CEO Lifetrack Medical Systems). As Dr. Thomas explains, "There is no such thing as a difficult person, just people with difficult personalities!" Those who understand personality and its biological basis never look at themselves or others in the same way again. Understanding personality this way will help you to understand what motivates you and others. This will also improve your ability to communicate. Who Do You Think You Are? will teach you how to adjust your internal and external environments to optimize your specific personality chemistry to become the person you always hoped you could be and create the life circumstances you only dreamed were possible. And, if that isn't extraordinary enough, this new knowledge will create more compassion within yourself and more peace within all the relationships you ever had, have now, or will have in the future. Understanding yourself from the inside out may be the single most important body of information you ever need to reach your full potential. Who do you think you are? You may be delighted and surprised when you discover yourself this way! "Dr. T has an uncanny ability to combine the art of psychology and the science of biology to create elegant ways to increase self-compassion, improve relationships and help people to become self-actualized." —Richard Tscherne, PhsD, clinical psychologist, director of The Gestalt Institute and Relationship Center of New York

Neurointerventions, Crime, and Punishment Jesper Ryberg,2019 Advances in new neuroscientific research tools and technologies have not only led to new insight into the processes of the human brain, they have also refined and provided genuinely new ways of modifying and manipulating the human brain. The aspiration of such interventions is to affect conative, cognitive, and affective brain processes associated with emotional regulation, empathy, and moral judgment. Can the use of neuroscientific technologies for influencing the human functioning brain as a means of preventing offenders from engaging in future criminal conduct be justified? In Neurointerventions, Crime, and Punishment, Jesper Ryberg considers various ethical challenges surrounding this question. More precisely, he provides a framework for considering neuroethical issues within the criminal justice system and examines a set of procedures which the criminal justice system relies on to deal with criminal offending. To do this, Ryberg addresses the following questions, among others: Is it morally acceptable to offer more lenient sentences to offenders in return for participation in neuroscientific treatment programs? Or would such offers be unacceptably coercive? Is it possible to administer neurointerventions as a type of punishment? Would it be acceptable for physicians to participate in the administration of neurointerventions on offenders? What is the moral significance of the sordid history of brain interventions for the present or future use of such treatment options? As rehabilitation comes back into fashion after many decades and as neuroscientific knowledge and technology advance rapidly, these intricate and controversial topics become increasingly more urgent. Ryberg argues that many of the in-principle objections to neuroscientific treatment are premature, but given the way criminal justice systems

currently function, such treatment methods should not be put into practice.
