Keeping Children Safe in Traffic OECD,2004-05-18 Tragically, one child out of every 2100 will die before their fifteenth birthday in a road-related incident. This book provides the latest statistics on children's injuries, fatalities and trends in transport. and examines the most effective current strategies for improving children's road safety.

Precious Cargo Arthur W. Hoffmann,2011-05-27 Precious Cargo is a term safety advocates use to describe helpless children who are at risk when riding in automobiles. These fragile passengers are dependent upon parents and caregivers to protect them and ensure their wellbeing. Motor vehicle crashes claim thousands of child fatalities and debilitating injuries every year. Unrestrained children are at the greatest risk of death and serious injury. Use of Child Restraint Systems is essential to protect your loved ones. The author reviews the historical basis of child car seats and the evolution of child safety restraints to date. Child restraint systems have a proven record of saving the lives of numerous children, and reducing serious injury of thousands of others. However, it has been a rocky road. Current child seats are effective when used correctly but misuse; confusion, and product recalls have tainted the industry. Progress toward advancing child safety has stalled; with little progress over the past 40 years. Obsolete and ineffective testing methodology needs to be corrected to advance the state-of-art. The Car companies are not involved in child restraint design, crash testing or vehicle installation problems. The National Highway Traffic safety Administration (NHTSA) oversight has been negligent and ineffective in advancing child safety technology. Cooperation between car companies, child seat manufacturers, NHTSA, and concerned safety advocates as the way-forward to advancing child safety is presented.

Brexit and the Car Industry Matthew Humphreys,Doug Munro,2019-05-23 One of the principal arguments put forth by Brexit supporters is that by

freeing the UK from the stranglehold of EU law, the country will be able to expand its markets through increased bilateral trade and enhance economic growth. This book tests this proposition by reference to the car industry. *Brexit and the Car Industry* explores the international position of the car market to argue that the hope of Brexit bringing regulatory freedom is illusory. The book starts by examining the structure of the vehicle industry, how its regulatory framework evolved and how the environment in which it operates is constrained by international standards and the practicalities associated with trading across different regulatory systems. By examining the evolution of vehicle regulations, particularly related to the environment, it argues that a UK independent path is not only impractical but self-defeating. The private car market is structured in such a way that is global, and meeting the various international regulatory requirements is a price of entry requirement which no bilateral trade agreements are likely to alter. The book also considers changing environment affecting the car industry in the context of an aspiration for regulatory freedom. The response to climate change and the impact of technological change – specifically driverless vehicles – are big questions for the industry and both are examined in this book. The book also considers the emergence of large metropolitan areas imposing their own use and environmental requirements operating separately to national standards. The future of electric and autonomous vehicles combined with the complexity of the regulatory environment with both international and localised pollution measures make the UK navigating a safe independent path through with a viable car industry highly questionable. Providing a comprehensive review of the relationship between regulatory frameworks and free trading models, this book is aimed at industry and legal professionals. It will also be of interest to students studying market behaviour, free trade law and the free movement of goods, and environmental protection.
