Flow at Ultra-High Reynolds and Rayleigh Numbers Russell J. Donnelly, Katepalli R. Sreenivasan, 2012-12-06 Scientists have learned to use liquid and gaseous helium to overcome the limitations imposed by the usual wind and water tunnels for testing the performance of aircraft or the behavior of the atmosphere. This book covers fundamental studies of the turbulence problem, practical applications of turbulence, superfluid turbulence, cryogenic turbulence research, and new types of miniature flow instrumentation, all which are crucial for high Reynolds number research. This state-of-the-art presentation will interest physicists in fluid dynamics, engineers working with turbulent flows, and naval and aerospace engineers testing realistic parameter ranges.

Free Space Optical Networks for Ultra-Broad Band Services Stamatios V. Kartalopoulos, 2011-09-09 This book provides a comprehensive description of an optical communications technology known as free space

optical—a next-generation communications network that uses optical signals through the atmosphere instead of fiber, RF, or microwaves. This technology potentially offers more complex ultrabandwidth communication services simultaneously to multiple users and in a very short time, compared to fiber optic technology. This text presents established and new advancements drawn from the latest research and development in components, networking, operation, and practices. This book describes the FSO network concepts in simple language. It provides comprehensive coverage in an easy-to-understand, progressive style that starts from the physics of the atmosphere and how it affects optical communications; continues with the design of a network node; and concludes with fiberless network applications from point-to-point to mesh topology. Important areas discussed include: Propagation of light in the atmosphere and phenomena that affect light propagation FSO transceiver design Point-to-point FSO systems Ring FSO systems Mesh-FSO systems and integrating the Mesh-FSO with the public network WDM Mesh-FSO FSO network security FSO-specific applications To meet the needs of both academia and industry, key mathematical formulas are presented along with descriptions, while extensive mathematical analyses are minimized or avoided. *Free Space Optical Networks for Ultra-Broad Band Services* serves as an ideal text for network communication professionals who enter the free space optical communication field, graduate students majoring in optical communications, optical communication engineers, researchers, managers, and consultants.

Advances in Craniofacial and Dental Materials Through Nanotechnology and Tissue Engineering
Giovanna Orsini, Angelo Putignano, Thimios A. Mitsiadis, 2019-05-16 Dental and craniofacial treatments are actually based on advances in biomaterials, tissue engineering and nanotechnology sciences. These developments brought considerable improvements on biomaterials commonly used in dental clinics. However, there is still a medical need for innovative techniques and materials for a controllable and efficient regeneration/repair of damaged craniofacial tissues and teeth. The novel biomaterials, imaging techniques, diagnostic and technological tools may offer thrilling perspectives for alternative treatments in dentistry.
