In Defense of Universal Human Rights Rhoda E. Howard-Hassmann, 2018-12-18 Should African and Muslim-majority countries be obliged to protect LGBT rights, or do such rights violate their cultures? Should Western-based corporations be held liable if their security guards injure union activists in another part of the world, or should such decisions be settled under local or domestic law? In this book, renowned human rights scholar Rhoda E. Howard-Hassmann vigorously defends the universality of human rights, arguing that the entire range of rights is necessary for all individuals everywhere, regardless of sex, color, ethnicity, sexuality, religion or social class. Howard-Hassmann grounds her defense of universality in her conception of human dignity, which she maintains must include personal autonomy, equality, respect, recognition, and material security. Only social democracies, she contends, can be considered fully rights-protective states. Taking issue with scholars who argue that human rights are “Western” quasi-imperialist impositions on states in the global South, and risk undermining community and social obligation, Howard-Hassmann explains how human rights support communities and can only be preserved if states and individuals observe their duties to protect them.

The Processes of Defense Joseph

Fernando, 2009-12-28 In this direct and scholarly book, Dr. Joseph Fernando provides the first in-depth exploration and up-to-date revision of the psychoanalytic theory of defenses since Anna Freud's 1936 classic, *The Ego and the Mechanisms of Defense*. The workings of three basic forms of defense—repression, denial, and post-traumatic defenses—are clearly described and illustrated with examples from Dr. Fernando's clinical practice. While comprehensive and authoritative in its coverage of defenses, the book is also highly original and clinically relevant, as Fernando introduces and illustrates new concepts including the zero process (a form of mental functioning related to trauma), contrast defenses (a type of denial defense that leads to repetition), and compound defenses (defenses formed by the tight melding of two or more basic defenses). This is a book not only of innovation but also of integration. Classical psychoanalytic concepts are integrated with new ideas related to current concerns with trauma, denial, and narcissism, and theoretical explications are integrated with practical advice about the handling of different defenses and clinical situations. This book will appeal to both beginners and seasoned clinicians and theoreticians, as well as to anyone interested

in psychoanalytic thought.

Atlantic Treaty Organization (NATO) Advanced

Strategies was held at the Atholl Palace Hotel,
Pitlochry, Perthshire, Scotland, from July 2
through July 14, 1995. This publication is the
proceedings of the Institute. The NATO Advanced
Studies Institute program of the NATO Science
Committee is a unique and valuable forum under
whose auspices over one thousand international

tutorial meetings have been held since the inception of the program in 1959. The ASI is intended to be primarily a high-level teaching activity at which a carefully defined subject is presented in a systematic and coherently structured program. The subject is treated in considerable depth by lecturers eminent in their fields and of international standing. The subject is presented to other experts or practitioners who will already have specialized in the field or possess an advanced general background appropriate to the topic. The ASI is aimed at an audience at the post-doctoral level. This does not exclude advanced graduate students or other senior participants with qualifications and achievements in the subject of the ASI or related areas. This ASI was prompted by several events in the defense environment.

Antioxidant Defense in Plants Tariq Aftab, Khalid Rehman Hakeem, 2022-05-04 This edited book highlights the molecular basis of various enzymatic and non-enzymatic antioxidants, defense mechanisms and adaptation strategies employed by plants to avoid the stressful conditions. Special focus is given to gene expression, omics and other latest technologies such as CRISPR-Cas mediated genome editing applications for defense related studies in plants. Environmental stresses such as drought, salinity or floods etc. induce the generation of reactive oxygen species (ROS) which causes severe damage to cell membrane integrity by accelerating lipid peroxidation. To counteract the detrimental effect of ROS, plants are inherited with an intricate and vibrant antioxidant defense

system, comprised of enzymatic (catalase, peroxidase, superoxide dismutase, glutathione reductase, glutathione S-transferase, guaiacol peroxidase, monodehydroascorbate reductase, dehydroascorbate reductase etc.), and non-enzymatic (glutathione, ascorbate, α -tocopherol, carotenoids, flavonoids etc.) antioxidants, which scavenge and/or reduce excess ROS and improve plant tolerance to various stresses. Stress tolerance in most crop plants is positively correlated with an efficient antioxidant system. Therefore, studying the efficiency of antioxidant defense systems in plants is necessary for facilitating the plant's nature of adaptation against challenging environments. This book is of interest to teachers, researchers and academic experts. Also, the book serves as additional reading material for undergraduate and graduate students of biotechnology and molecular biology of plants.

Advances in Plant Defense Mechanisms Josphert N. Kimatu, 2022-12-14 Increasing human migrations, technological advances, agricultural activities, and climate change are forcing plants to adapt to new environments. This book highlights current morphological, anatomical, physiological, molecular, and genomic advances in plant defense mechanisms. These advances, including epigenetic mechanisms, have been linked to observed phenotypic plant plasticity. The book also outlines next-generation food systems, considering

the resilience and sustainability of plant genomes and epigenomes.

The Hippopotamus Defence Alessio de Santis, 2019-08-08 The Hippopotamus Defence is just what a club player needs. It's a straightforward and clear-cut chess opening that avoids the ever growing body of mainline theory. It's universal: Black can use the Hippo against virtually all of White's choices (1.e4, 1.d4, 1.c4, 1.f4, the Colle, London, Trompowsky, Réti and others). It's not very well known and will surprise many opponents. On top of all that, the Hippo is seriously underestimated: with its characteristic double fianchetto it may look quiet, but inside there lurks a very dangerous animal. FIDE Master Alessio de Santis is one of the world's greatest experts on the Hippo and has written a practical, well-structured and accessible manual. His book can be studied on three levels: after a first flash of 3 to 4 hours you will be familiar with the Hippo's basic moves and key variations, its strategic themes and recurring manoeuvres. In the second and third stage De Santis leads you through the most important concrete lines and introduces the Semi-Hippopotamus to counter some specific White ideas. You can use the Hippo as a surprise weapon or as your main repertoire. The extensive explanations and clear conclusions make this book an easy-to-navigate manual for all club players. If you like to confront your opponents with some unexpected counter-attacks, then you need not look any further.
