Venus Seymour Simon,2012-10-01 Spectacular full-color photographs introduce Earth's sister planet, from its scorching deserts and clouds of sulfuric acid to the crushing pressure of its atmosphere. From Kirkus Reviews: In the same large, square format as Simon's books on other planets, a clear, concise text draws on the latest findings and the best of recent color photos. Venus has her special charms--the hottest planet in the solar system, covered with clouds of sulphuric acid, with bizarre surface details--all emerging from photos and radar maps taken from earlier Russian expeditions and NASA's Magellan spacecraft, which is still orbiting Venus. Our sister planet? Not even human siblings exhibit such diversity, and why this is so is an intriguing puzzle." Newly updated (2012).

Venus Bold Kids,2021-10-21 This is one of the interesting facts for kids because Venus is a planet that is unique in that it travels around the sun in a very elongated orbit. It travels around the sun at a slower pace than other solar systems. And it rotates the other way too. It usually takes about 247 Earth days to rotate once around the Sun.

The Planets Nirmala Nataraj,2017-11-07 "Might be just the book to bring out your inner astronomer . . . over 250 pages of breathtaking images from the past 50 years of NASA's space exploration." —Parade Preface by Bill Nye This magnificent volume offers a rich visual tour of the planets in our solar system. More than two-hundred breathtaking photographs from the archives of NASA are paired with extended captions detailing the science behind some of our cosmic neighborhood's most extraordinary phenomena. Images of newly discovered areas of Jupiter, fiery volcanoes on Venus, and

many more reveal the astronomical marvels of space in engrossing detail. Anyone with an interest in science, astronomy, and the mysteries of the universe will delight in this awe-inspiring guide to the wonders of the solar system. "As you turn through the pages, you're hit with true moments of awe, photos that remind you the power of nature extends beyond our own planet." —Houston Chronicle "Breathtaking pictures show the otherworldly magic of the solar system . . . The images are at once humbling and uplifting: Here in the black void of space is Saturn's frozen moon, Mimas, white and pitted like a galactic golf ball; here is the tiny golden orb called lo, casting a shadow in a perfect inky circle on the marbled surface of Jupiter; here is the great sun, flames spurting from its surface like plumes." —The Wall Street Journal "[A] gorgeous photographic tour of space . . . The collection is a remarkable reminder of how much has been learned about the planets over the past few decades, solving many mysteries yet introducing many more." —Publishers Weekly

Venus Paul Fleisher, 2009-08-01 Describes the planet's characteristics, discussing its position, size, composition, and exploration.

Venus Gregory L. Vogt, Gregory Vogt, 1996-09 Each of these strikingly illustrated books is a fantastic journey through the solar system. Expert science writer Gregory L. Vogt provides the most current information available from NASA about surface features, weather, atmosphere, moons, rings, and other unusual features. The temple of venus Hans-Jürgen Döpp,2021-06-30 Amsterdam rejoices in more than simply its famous canals and its celebrated collections of the works of Rembrandt, Vermeer and Van Gogh. It has a museum dedicated to the Goddess of Love, which welcomes no fewer than 500,000 visitors a year. From all over the world people come in their thousands to this unusual establishment known as "The Temple of Venus". First put on display

together in 1985 by Monique van Marle and her father, this collection of erotic works is exceptional for the quality of the objects exhibited, its engravings and its photographs of yesteryear. Far from being a focus for voyeuristic prurience, the Museum is intended to be understood as a serious centre for the history of erotic art. This book takes us on a guided tour of this fascinating place devoted to a fascinating subject.

Venus Inferred Laura Letinsky,2000-11-01 We are all, it is said, looking for love. But what does love look like? Does it look the way it feels? The visual vocabulary of romance-its attendant comforts and vulnerabilities, ambivalences and unclarities-is the subject of Venus Inferred. This collection of 46 richly reproduced color photographs is Laura Letinsky's study of contemporary lovers as they are seen, as they show, and as they see themselves making love and inhabiting domestic space. Entering what might be called the intimate sphere, Letinsky's camera explores a space too personal to be termed public and yet whose cultural and emotional shape is uncannily recognizable. Over a seven-year period, Letinsky visited lovers in their homes, hotel rooms, bedrooms, bathrooms, and kitchens and recorded in detail the promises, disharmonies, and disappointments that inhere in modern coupling. Accompanying the photographs is an essay by critic Lauren Berlant, which presents an aesthetic and cultural analysis of the contemporary images of romance and intimacy. Berlant contemplates the burden of clarity that sexuality bears, implicit both in conventional romantic ideals and in the counterpolitics of the flesh that desires to escape them. Thus arises the sublime ordinariness of Letinsky's couples, Berlant argues: As 'normal' pleasures themselves become deemed modes of domination, the already destabilizing aspects of sexuality can feel even more unsettling. An interview between Letinsky and Berlant unfolds the artist's intellectual formation while exploring the unsettling and pleasurable power of her images as they circulate through the domains of romance, sexuality, and contemporary culture.
