Body Mass Index and Health Linda A. Ferrera,2005 The Federal guidelines on the identification, evaluation, and treatment of overweight and obesity in adults have defined overweight as a body mass index value between 25 and 29.9; and obesity as a body mass index value greater than or equal to 30. BMI is a ratio between weight and height. It is a mathematical formula that correlates with body fat, used to evaluate if a person is at an unhealthy weight (given a certain height). BMI value is more useful for predicting health risks than the weight alone (for adults ages 18 and up). Individuals with high BMI's are at increased risk of developing certain diseases, including: Hypertension, Cardiovascular Disease, Dyslipidemia, Adult-Onset Diabetes (Type II), Sleep Apnea, Osteoarthritis, Female Infertility, and other Conditions, including: idiopathic intracranial hypertension lower extremity venous stasis disease, gastroesophageal reflux and urinary stress incontinence. This new book gathers research from around the world in the critical field of obesity research and its effects.

Neural Interface: Frontiers and Applications Xiaoxiang Zheng,2019-11-15 This book focuses on the frontiers of neural interface technology, including hardware, software, neural decoding and encoding, control systems, and system integration. It also discusses applications for neuroprosthetics, neural diseases and neurorobotics, and the toolkits for basic neuroscience. A neural interface establishes a direct communication channel with the central or peripheral nervous system (CNS or PNS), and enables the nervous system to interact directly with the external devices. Recent advances in neuroscience and engineering are speeding up neural interface technology, paving the way for assisting, augmenting, repairing or restoring sensorimotor and other cognitive functions impaired due to neurological disease or trauma, and so improving the quality of life of those affected. Neural interfaces are now being explored in applications as diverse as rehabilitation, accessibility, gaming, education, recreation, robotics and human enhancement. Neural interfaces also represent a powerful tool to address fundamental questions in neuroscience. Recent decades have witnessed tremendous advances in the field, with a huge impact not only in the development of neuroprosthetics, but also in our basic understanding of brain function. Neural interface technology can be seen as a bridge across the traditional engineering and basic neuroscience. This book provides researchers, graduate and upper undergraduate students from a wide range of disciplines with a cutting-edge and comprehensive summary of neural interface engineering research.

Obesity Discourse and Fat Politics Lee Monaghan,Rachel Colls,Bethan Evans,2015-12-22 There is considerable rhetoric and concern about weight and obesity across an increasing range of national contexts. Alarmist claims about an 'obesity time-bomb' are continually recycled in policy reports, reviews and white papers, each of which begin with the assumption that fatness is fundamentally unhealthy and damaging to national economies. With contributions from the UK, Canada, the USA and Australia, this book offers alternative critical perspectives on this alleged public health crisis which were, in part, developed through an Economic and Social Research Council seminar series on Fat Studies and Health at Every Size (HAES). Written by scholars from a range of disciplines and the health professions, themes include: an interrogation of statistical procedures used to construct the obesity epidemic, overweight and obesity as cultural signifiers for Type 2 diabetes, understandings of healthy eating and healthy weight in a 'problem' population, gendered expectations on men and women to lose weight, the visual representation of obesity, tensions when researching (anti-)fatness, critical dietitians' engagement with HAES, alternative ways of promoting physical activity, and representations of obesity in the media. This book was originally published as a special issue of Critical Public Health.

Computational Intelligence - Volume II Hisao Ishibuchi,2015-12-30 Computational intelligence is a component of Encyclopedia of Technology, Information, and Systems Management Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Computational intelligence is a rapidly growing research field including a wide variety of problem-solving techniques inspired by nature. Traditionally computational intelligence consists of three major research areas: Neural Networks, Fuzzy Systems, and Evolutionary Computation. Neural networks are mathematical models inspired by brains. Neural networks have massively parallel network structures with many neurons and weighted connections. Whereas each neuron has a simple input-output relation, a neural network with many neurons can realize a highly non-linear complicated mapping. Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non-linear mapping required in a particular application task. Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language. For example, it is very difficult to mathematically define the meaning of "cold" in everyday conversations such as "It is cold today" and "Can I have cold water". The meaning of "cold" may be different in a different situation. Even in the same situation, a different person may have a different meaning. Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language. As a result, fuzzy systems have been successfully applied to real-world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF-THEN rules. Evolutionary computation includes various population-based search algorithms inspired by evolution in nature. Those algorithms usually have the following three mechanisms: fitness evaluation to measure the quality of each solution, selection to choose good solutions from the current population, and variation operators to generate offspring from parents. Evolutionary computation has high applicability to a wide range of optimization problems with different characteristics since it does not need any explicit mathematical formulations of objective functions. For example, simulation-based fitness evaluation is often used in evolutionary design. Subjective fitness evaluation by a human user is also often used in evolutionary art and music. These volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers.

Framing Fat Samantha Kwan,Jennifer Graves,2013-05-03 According to public health officials, obesity poses significant health risks and has become a modern-day epidemic. A closer look at this so-called epidemic, however, suggests that there are multiple perspectives on the fat body, not all of which view obesity as a health hazard. Alongside public health officials at the Centers for Disease Control and Prevention are advertisers of the fashion-beauty complex, food industry advocates at the Center for Consumer Freedom, and activists at the National Association to Advance Fat Acceptance. Framing Fat takes a bird's-eye view of how these multiple actors construct the fat body by identifying the messages these groups put forth, particularly where issues of beauty, health, choice and responsibility, and social justice are concerned. Samantha Kwan and Jennifer Graves examine how laypersons respond to these conflicting messages and illustrate the gendered, raced, and classed implications within them. In doing so, they shed light on how dominant ideas about body fat have led to the moral indictment of body nonconformists, essentially "framing" them for their fat bodies.

Body Mass Index Linda A. Ferrera,2005 The Federal guidelines on the identification, evaluation, and treatment of overweight and obesity in adults have defined 'overweight' as a body mass index value between 25 and 29.9; and 'obesity' as a body mass index value greater than or equal to 30. BMI is a ratio between weight and height. It is a mathematical formula that correlates with body fat, used to evaluate if a person is at an unhealthy weight (given a certain height). BMI value is more useful for predicting health risks than the weight alone (for adults ages 18 and up). Individuals with high BMI's are at increased risk of developing certain diseases, including: Hypertension, Cardiovascular Disease, Dyslipidemia, Adult-Onset Diabetes (Type II), Sleep Apnea, Osteoarthritis, Female Infertility, and other Conditions, including: idiopathic intracranial hypertension lower extremity venous stasis disease, gastroesophageal reflux and urinary stress incontinence. This new book gathers research from around the world in the critical field of obesity research and its effects.

The Body Beautiful V. Swami,A. Furnham,2007-11-30 In this volume, contributors from a range of perspectives - evolutionary psychology to anthropology, sociology to cognitive and motivational psychology - explore questions of what our attractiveness preferences are and why we find certain others physically attractive, offering a fresh perspective to understanding the perception of attractiveness.

Preconception Health and Care: A Life Course Approach Jill Shawe,Eric A.P. Steegers,Sarah Verbiest,2020-06-26 This book provides a practical, multidisciplinary approach to support a broad range of health professionals, social workers, public health workers and others tasked with providing health and care to young adults. The continuum of life begins with the health and wellness of parents prior to conception, followed by embryonic and fetal development, and continues throughout life. Each person's life stages prepare them for the next and determine their health outcome and wellbeing over time. The text highlights the importance of promoting health throughout the lifespan, the influence of intergenerational health, and the concept of the Developmental Origins of Health and Disease in epigenetic processes and embryology. Authors underscore the importance of advancing health equity and lift up some of the ethical

considerations in this work. The authors explore specific interventions in four major categories: Lifestyle, Infections, Nutrition, and Contraception / Pregnancy Planning (LINC). Preconception care is defined by the World Health Organization as the provision of biomedical, behavioural and social health interventions to women and couples before conception. Preconception care includes evidence-based interventions to improve health status, to reduce behaviours, individual and environmental factors that contribute to poor health outcomes. This book offers readers evidence-based guidance regarding fertility awareness and sperm health, genetic counselling and lifestyle assessments, as well as mental wellbeing, alcohol, tobacco and pharmacotherapy, and specialist care for those with chronic conditions, including a review of medications. It also covers relevant infections, including HIV and the Zika virus, as well as different types of environmental and occupational exposure. The book employs a framework focusing on health promotion, the social determinants of health, and the science behind preconception care. Strategies for improving preconception and interconception health, including examples from around the globe, are described in detail.

A full explanation of the value of PET in disease staging and restaging is followed by discussion of its role in guiding individualized, response-adapted therapy in both early and advanced disease based on assessment of treatment sensitivity. Further chapters explore in detail the current application of PET for determination of tumor metabolic volume and planning of involved field radiotherapy. The book concludes by discussing PET scan reporting in clinical practice and the rules that have now been formally set following a number of international workshops designed to develop standard reporting criteria based on expert agreement. The authors are leading authorities who adopt an interdisciplinary approach in covering the most important aspects of the use of PET in Hodgkin lymphoma in a readily understandable way. PET Scan in Hodgkin Lymphoma will be of value to oncologists, hematologists, medical physicists, radiotherapists, and nuclear medicine specialists.
