Visual Memory

Steven J. Luck,Andrew Hollingworth

Visual Memory Steven J. Luck,Andrew Hollingworth,2008-09-10 Vision and memory are two of the most intensively studied topics in psychology and neuroscience. This book provides a state-of-the-art account of visual memory systems. Each chapter is written by an internationally renowned researcher, who has made seminal contributions to the topic.

Visual Memory Timothy F. Brady,Wilma A. Bainbridge,2022-03-29 Featuring contributions from world-leading researchers, this book explores the relationship between visual perception and memory. It bridges the traditionally separate fields of vision science and recognition memory and deals with an interdisciplinary set of perspectives combining research in psychology, neuroscience, and artificial intelligence. The book makes new connections between the wealth of research from each respective field, developing the idea that visuospatial memory is our best memory system. This volume traverses topics grounded in both empirical study and real-world applications, including working (short-term) memory, long-term memory, the neuroscience of memory, development of memory over the lifespan, autobiographical memories, false memories, and eyewitness testimony. It argues that an increased knowledge of how visuospatial memory works can lead to an improved understanding of the basic features of memory, as well as providing strategies for memory improvement. The book features cutting edge visual memory research, where converging methods in psychophysics, cognitive neuroscience, and computational modeling have been propelling the field forward. Visual Memory is an essential read for all students and researchers of memory and visual perception. It will also be useful for researchers and students in related fields including human-computer interaction, data visualization, cognitive science, and cognitive enhancement.

Improving Visual Memory 1 (Gr. 3-4) ,

The Visual World in Memory James R. Brockmole,2008-10-07 The book examines how well we remember what we see. Research in human memory for visual material varies tremendously across the time scales, stimuli, and scenarios of interest. Because of these distinct pursuits, research in the field of 'visual memory' is in practice rather compartmentalized and as such is disseminated across a range of literatures. The Visual World in Memory pulls together this disparate field with a series of chapters, each written by a leading expert, that concisely present the state-of-the-science in all the areas of research. The result is a single source of information that bridges the divides that separate the field as a whole. Each chapter reviews and analyzes current theories and controversies regarding such issues as visual and spatial working memory, memory for visual features, conjunctions, objects, and locations, memory for faces, memory for real-world scenes, memory for visual events, the role of visual memory in motor planning and action, the relationship between visual memory, reference frames, and navigation, and visual imagery. The rigorous discussion and analysis included in each chapter will appeal to established researchers and vision scientists whilst the breadth of the book will make it an ideal companion for students learning about memory.

The present book concerns the interaction between vision and memory: How do we remember what we see? And how does our memory for the visual world influence subsequent perception and action? topics in psychology and neuroscience, and the intersection etween them--visual memory--is emerging as a fertile ground for research. Certain memory systems appear to specialize in This book provides a state-of-the-art account of visual memory systems. Each chapter is written by an internationally renowned researcher, who has made seminal contributions to the topic. The chapters are comprehensive, providing both a broad overview of each topic and a summary of the latest research. They also present new perspectives that advance our theoretical understanding of visual memory and suggest directions for future research. After an introductory overview by the editors, chapters address visual sensory memory (iconic memory), visual short-term memory, and the relationship between visual memory and eye movements. Visual long-term memory is then reviewed from several different perspectives, including memory for natural scenes, the relationship between visual memory and object recognition, and associative learning. The final chapters discuss the neural mechanisms of

visual memory and neuropsychological deficits in visual memory. This book is a comprehensive guide to visual memory research that will be a valuable resource for both students and professionals.

Improving Visual Memory 1 Remedia Publications Staff,1983-01-01 Help your students become more observant! Twenty-two creative illustrations of situations and objects. Visual Memory Skills Mark Hill,Katy Hill,2008-01-01 The book is divided into handy sections, each of which is designed to improve a different aspect of visual memory, such as remembering objects, object details and elements of objects like colour and pattern. The second part of the book explores sequential memory for objects, letters and digits; andobject details such as orientation and size.

Change Blindness and Visual Memory Daniel J. Simons,2000-01-01 A central goal in the study of object and scene perception is to understand how visual information is integrated across views to provide a stable, continuous experience of our environment. Research on issues ranging from visual masking to priming across saccades to the representation of spatial layout across views has addressed the issue of what information is preserved from one view to the next. Recently, research on visual memory for objects and scenes has led to striking claims about the nature of the information that is and is not preserved from one instant to the next. For example, studies of change blindness have shown that striking changes to objects and scenes can go undetected when they coincide with an eye movement, a flashed blank screen, a blink, or an occlusion event. These studies suggest that relatively little visual information about objects and scenes is combined across views. Despite these failures of change detection, observers somehow manage to experience a stable, continuous visual environment. This special issue seeks to unite recent studies of change blindness with studies of visual integration to better understand the nature of our representations and the richness of our visual memory.

Rhetoric, Remembrance, and Visual Form Anne Teresa Demo,Bradford Vivian,2012-03-12 This volume offers a multifaceted investigation of intersections among visual and memorial forms in modern art, politics, and society. The question of the relationships among images and memory is particularly relevant to contemporary society, at a time when visually-based technologies are increasingly employed in both grand and modest efforts to preserve the past amid rapid social change. The chapters in this book provide valuable insights concerning not only how memories may be seen (or sighted) in visual form but also how visual forms constitute noteworthy material sites of memory. The collection addresses this central theme with a wealth of interdisciplinary and international approaches, featuring conventional scholarly as well as artistic works from such disciplines as rhetoric and communication, art and art history, architecture, landscape studies, and more, by contributors from around the globe.

The investigation of what people understand and remember from rapidly presented sequences of visual stimuli began in the late 1960s. In this book prominent researchers approach the topic from psychological, neuropsychological, and electrophysiological perspectives. Specific issues include RSVP (rapid serial visual presentation), attentional blink, repetition blindness, and scene perception. The contributors review recent research on our ability to comprehend and remember pictures of objects and scenes, written words, and sentences when the visual stimuli are presented sequentially at rates of up to ten items per second. In short, the book is about our remarkably developed abilities to understand and remember the contents of very briefly presented material.ContributorsDaphne Bavelier, Veronika Coltheart, Helene Intraub, Nancy Kanwisher, Steven J. Working Memory Capacity Nelson Cowan,2016-04-14 The idea of one's memory filling up is a

humorous misconception of how memory in general is thought to work; it actually has no capacity limit. However, the idea of a full brain makes more sense with reference to working memory, which is the limited amount of information a person can hold temporarily in an especially accessible form for use in the completion of almost any challenging cognitive task. This groundbreaking book explains the evidence supporting Cowan's theoretical proposal about working memory capacity, and compares it to competing perspectives. Cognitive psychologists profoundly disagree on how working memory is limited: whether by the number of units that can be retained (and, if so, what kind of units and how many), the types of interfering material, the time that has elapsed, some combination of these mechanisms, or none of them. The book assesses these hypotheses and examines explanations of why capacity limits occur, including vivid biological, cognitive, and evolutionary accounts. The book concludes with a discussion of the practical importance of capacity limits in daily life. This 10th anniversary Classic Edition will continue to be accessible to a wide range of readers and serve as an invaluable reference for all memory researchers.

Strengthening Visual Memory Skills Penny Groves,2001-01-15 Fun, multisensory exercises aid students to remember visual material such as shapes, numbers, and letters. Students touch, say, and write or arrange visual stimuli to help them become stronger learners.The lessons in this book consist of reproducible pages, background information, easy-to-evaluate exercises, and checklists for tracking success.

Verbalising Visual Memories Toby J. Lloyd-Jones,Maria A. Brandimonte,Karl-Heinz Bäuml,2008 This special issue, Verbalising Visual Memories, comprises research on: (a) verbal interference and facilitation in face and person processing; (b) similarities and differences between effects of verbalisation and processing in the Navon task (Navon, 1977); and (c) effects of verbalisation in visual imagery and object memory. It is clear that verbal processes influence the encoding, storage and retrieval of visual information. Moreover, different forms of verbal interference and facilitation are likely to be due to different mechanisms in different contexts. The state-of-the-art is that we are just beginning to understand the rich complexity of the problem.
