Short, 2000 Beaches of the Queensland Coast provides the first description of all Queensland's ocean beaches between Cooktown and Coolangatta, including beaches on 18 islands and in several large bays. It is based on the results of the Australian Beach Safety and Management Program, a nationwide assessment of Australian beach systems. This book has two aims. First, to provide the public with general information on the origin and nature of Queensland's beaches, including the contribution of geology, oceanography, climate and biota to the beaches, and information on beach hazards and safety. Second, to provide a description of each beach, including its name(s), location, access, facilities, dimensions and the character of the beach and surf zone. The book comments on the suitability of the beach for bathing, surfing and fishing, with special emphasis on the natural hazards. Based on the physical hazards, all beaches are rated in terms of public safety and scaled from 1 (least hazardous) to 10 (most hazardous).

The Surfer's Travel Guide Australia 9th Ed Chris Rennie, 2019-12-10 Right now there are thousands of waves breaking on beaches all around Australia. Some will be a tempting 4ft, over white sand, in crystal clear water, others will be a bone crunching 10ft, grinding over shallow reefs, and scaring the hell out of all in sight. That is the magic of Australia's coastline. It's diversity and enormity. This guide will get you to all those places and provide you with plenty of essential information and a good laugh along the way. It's a real surfer's travel guide. It includes: - In-depth wave descriptions for every major surf break in Australia. - A comprehensive accommodation, food and party guide, as well as flat day fun activities. - Surf survival techniques, road-trip planning, 4wd tips, advice on buying second hand cars and weather forecasting. - Detailed surf maps. Dr. Rip's Essential Beach Book Rob Brander, 2024-05-28 How do waves break, and what makes good surf? What are dangerous rip currents, and how do you spot one? What should you do if you get caught in one? Australia's best-known surf scientist, Rob "Dr. Rip" Brander, takes readers on a fascinating and entertaining journey to uncover how beaches form and behave, the science of waves and currents, and how beaches respond to storms and climate change. He explains where the sand we lay our towels on came from, how the tides that wash up new treasures each day work, why no two beaches are exactly the same, and why some of them are disappearing. He also explores some of the hazards to watch out for, from rip currents to tsunamis to the (unlikely) event you find yourself swimming with a shark. Whether you're a surfer looking for the perfect wave or you just enjoy hitting the beach with friends and family, this book is a must-read for all ocean lovers.

Sea Kayaking Philip Woodhouse, 2013-12-16 In *Sea Kayaking*, a comprehensive guide for those who travel the open waters in the Southern Hemisphere, Philip Woodhouse, Australian paddler and Royal Australian Air Force veteran, shares his years of experience, technical training, and military teaching skills. What began as a personal reference was soon developed as a training manual, recommended by the Victorian Sea Kayak Club to its members and East Coast Kayaking to their patrons and Australian Canoeing students. *Sea Kayaking* covers boat design, kit requirements, paddling skills, health and well-being, meteorology, the ocean environment, navigation, communications, conservation and minimal-impact camping, conservation, seamanship, electrical bilge pumps, solar panels, light sources, boat repairs, leadership, risk management, basic safety and survival strategies, as well as a brief overview about the history and various types of canoeing. There is also a comprehensive glossary to assist the reader in understanding the terms and concepts discussed in the main text. Woodhouse's work differs from most manuals about sea kayaking in that it is written from the perspective of someone who paddles the Southern Hemisphere. As such, the major differences between the two hemispheres' weather patterns, navigation, laws, and terminology are discussed, as well as compared to their Northern Hemisphere counterparts. In the end, paddling skills are paddling skills, hypothermia is hypothermia, and twenty-five-knot winds are twenty-five-knot winds. A three-metre tidal range can still produce a long haul across mud flats when the tide is out and landing through two-metre surf is still scary (though a lot of fun), no matter where you paddle.
