The book comments on the suitability of the beach for bathing, surfing and fishing, with special emphasis on the natural hazards. Dr. Rip's Essential Beach Book Rob Brander,2024-05-28 How do waves break, and what makes good surf? What are dangerous rip currents, and how do you spot one? What should you do if you get caught in one? Australia's best-known surf scientist, Rob "Dr. Rip" Brander, takes readers on a fascinating and entertaining journey to uncover how beaches form and behave, the science of waves and currents, and how beaches respond to storms and climate change. He explains where the sand we lay our towels on came from, how the tides that wash up new treasures each day work, why no two beaches are exactly the same, and why some of them are disappearing. He also explores some of the hazards to watch out for, from rip currents to tsunamis to the (unlikely) event you find yourself swimming with a shark. Whether you're a surfer looking for the perfect wave or you just enjoy hitting the beach with friends and family, this book is a must-read for all ocean lovers.

Sea Kayaking Philip Woodhouse,2013-12-16 In Sea Kayaking, , comprehensive guide for those who travel the open waters in the Southern Hemisphere, Philip Woodhouse, Australian paddler and Royal Australian Air Force veteran, shares his years of experience, technical training, and military teaching skills. What began as a personal reference was soon developed as a training manual, recommended by the Victorian Sea Kayak

Club to its membersand East Coast Kayaking to their patrons and Australian Canoeing students. Sea Kayaking covers boat design, kit requirements, paddling skills, health and well-being, meteorology, the ocean environment, navigation, communications, conservation andminimal-impact camping, conservation, seamanship, electrical bilge pumps, solar panels, light sources, boat repairs, leadership, risk management, basic safety and survival strategies , as well as a brief overview about the history and various types of canoeing.. There is also a comprehensive glossary to assist the reader in understanding the terms and concepts discussed in the main text. Woodhouses work differs from most manuals about sea kayaking in that it is written from the perspective of someone who paddles the Southern Hemisphere. As such, the major differences between the two hemispheresweather patterns, navigation, laws, and terminologyare discussed, as well as compared to their Northern Hemisphere counterparts. In the end, paddling skills are paddling skills, hypothermia is hypothermia, and twenty-five-knot winds are twenty-five-knot winds. A three-metre tidal range can still produce a long haul across mud flats when the tide is outand landing through two-metre surf is still scary (though a lot of fun), no matter where you paddle.
