we chose mathematica because of its  
 huge suite of mathematical functions  
 that can be implemented by simple one  
 line commands for its symbolic  
 computational power and for the large  
 number of other texts that can be  
 used by a student to gain proficiency  
 in the language and to glean ideas

models of real cellular systems can become extremely complicated when constructed in this way for example the model of the red blood cell described in chapter 7 contains 60 state variables metabolites and 270 parameters such systems are often said to be overparameterized with respect to the available experimental data
