Designing Work Groups, Jobs, and Work Flow Toni Hupp,Craig Polak,Odin Westgaard,1995-04-27 Designing Work Groups, Jobs, and Work Flow offers an integrated approach to using the most powerful tools of reengineering to design single work units that are productive, responsive, and build participant ownership and commitment. Toni Hupp and her coauthors present a tool kit with many checklists, reusable worksheets, flowcharts, and other resources for analyzing and designing the daily work flow, group structure, and job responsibilities of intact work groups. They provide the step-by-step procedures for capturing who does what, when, why, and how, and offer guidelines for improving critical work processes.

Working with Machines Michel Baudin,2007-04-20 How do companies in high labor cost countries manage to remain competitive? In western manufacturing, the more manual a process, the more severe the competitive handicap of high wages. Full automation would make labor costs irrelevant but remain impractical in most industries. Most successful manufacturing processes in advanced economies are neither fully manual nor fully automatic -- they involve interactions between small numbers of highly skilled people and machines that account for the bulk of the manufacturing costs and thereby remain competitive. In Working with Machines: The Nuts and Bolts of Lean Operations With Jidoka, author Michel Baudin explains how performance differences that can be observed from one factory to the next are due to the way people use the machines -- from the human interfaces of individual machines to the linking of machines intocells, the management of monuments and common services, automation,

maintenance, and production control.

The Occupational Ergonomics Handbook Waldemar Karwowski,William S. Marras,1998-12-18 Occupational ergonomics and safety studies the application of human behavior, abilities, limitations, and other characteristics to the design, testing, and evaluation of tools, machines, systems, tasks, jobs, and environments for productive, safe, comfortable, and effective use. Occupational Ergonomics Handbook provides current, comprehensive knowledge in this broad field, providing essential, state-of-the-art information from nearly 150 international leaders of this discipline. The text assesses the knowledge and expertise applied to industrial environments: Providing engineering guidelines for redesigning tools, machines, and work layouts Evaluating the demands placed on workers by current jobs Simulating alternative work methods Determining the potential for reducing physical job demands based on the implementation of new methods Topics also include: Fundamental ergonomic design principles at work Work-related musculoskeletal injuries, such as cumulative trauma to the upper extremity (CTDs) and low back disorders (LBDs), which affect several million workers each year with total costs exceeding \$100 billion annually Current knowledge used for minimizing human suffering, potential for occupational disability, and related worker's compensation costs Working conditions under which musculoskeletal injuries might occur Engineering design measures for eliminating or reducing known job-risk factors Optimal manufacturing processes regarding human perceptual and cognitive abilities as well as task reliability Identifying the worker population affected by adverse conditions Early medical and work intervention efforts Economics of an ergonomics maintenance program Ergonomics as an essential cost to doing business Ergonomics intervention includes design for manufacturability, total quality management, and work organization. Occupational Ergonomics Handbook demonstrates how ergonomics serves as a vital component for the activities of the company and enables an advantageous cooperation between management and labor. This new handbook serves a broad segment of industrial practitioners, including industrial and manufacturing engineers; managers; plant supervisors and ergonomics professionals; researchers and students from academia, business, and government; human factors and safety specialists; physical therapists; cognitive and work psychologists; sociologists; and human-computer communications specialists.
